ORDINANCE: B.A./B.Sc./B.Com./B.Sc. (Home Science) EXAMINATIONS

1. The duration of the course of instruction for the B.A./B.Sc./B.Com./B.Sc. (Home Science) shall be three years and the examination for Part-I shall be held at the end of Ist year., Part-II examination at the end of 2nd year and Part-III examination at the end of third year. The examination in Part-I & II shall be held once a year ordinarily in the month of April or on such dates as may be fixed by the Vice-Chancellor. The examination in Part-III shall be held twice a year ordinarily in the month of April and September or on such dates as may be fixed by the Vice-Chancellor.

The Supplementary examination for part-I and part-II for compartment/reappear

Candidates shall be held ordinarily in the month of September or on such dates as may be fixed by the Vice-Chancellor.

- The date of commencement of the examination as well as the last date for the receipt of examination forms and fee as fixed by the Vice-Chancellor, shall be notified by the Registrar/ Controller of Examinations to all the colleges admitted to the privileges of the University.
- A candidate's admission form and fee may be accepted after the last date of payment of late fee as prescribed up to the period notified by the University.
- 4. No one shall be eligible to join the first year (Part-I) class of B.A./B.Sc./B.Com./B.Sc. (Home Science) unless:
 - i) he/she has passed one of the following examinations with 33% marks in aggregate for admission to B.A. Part-I, 35% for admission to B.Sc. (Home Science) Part-I, 40% for admission to B.Com. Part-I and 45% for admission to B.Sc. Part-I.
 - a) Senior Secondary Certificate Examination of Haryana Education Board, Bhiwani.

OR

b) B.A./B.Sc. (Home Science) Part-I examination under old scheme of this University.

OR

- c) Diploma in Pharmacy Course. for (B.A./B.Sc.-I only).
- d) Any other examination recognised by the Academic Council as equivalent to (a) or (b) or (c) above.
- Note: 1. The candidate seeking admission to B.Sc. (Non-Medical Group) Part-I should have passed the above examination with English, Physics, Chemistry and Mathematics and those seeking admission to B.Sc. (Medical Group) Part-I should have passed the above examination with English, Physics, Chemistry and Biology.
 - 2. The admission to B.Sc. (Home Science) Course shall be open to Women candidates only.
 - 3. If a candidate of another Board did not pass in the subject of English at 10+2 level, he/she may be allowed provisionally to join the B.A./B.Sc./B.Com./B.Sc. (Home Science) Part-I class as the case may be under new scheme of this University subject to his/her qualifying in the subject of English of 10+2 examination at the Supplementary examination of the same year from the Board concerned. Such a candidate shall have to furnish to the Principal of the College the proof of his/her haiving cleared the subject of English upto 20th Dec. of the year of admission failing which his/her admission to B.A./B.Sc./B.Com./B.Sc. (Home Science) Part I examination shall stand automatically cancelled.
- 5. No one shall be eligible to join the second year (Part-II) class of B.A./B.Sc./B.Com./B.Sc. (Home Science) course unless he/she has passed:
 - a) B.A./B.Sc./B.Com./B.Sc. (Home Science) Part-I examination as the case may be, under new scheme of this University.

b) B.A./B.Sc./B.Com./B.Sc. (Home Science) Part-II examination as the case may be, under old scheme of this University.

OR

- c) An examination recognised as equivalent to (a) or (b) above.
 - A student who wishes to seek admission/migration to Part-II Course after passing the Senior Secondary Certificate Examination under (10+2 system) or an examination recognised as equivalent thereto and also after having passed the 1st year examination of any statutory University, recognised by this University as equivalent to 1st year examination of this University under new scheme may be allowed to do so provided, that he/she has secured 33% or 40% or 45% or 35% marks, as the case may be in aggragate of the Senior Secondary Certificate Examination or of any equivalent examination and the minimum percentage of marks in the 1st year examination of the degree course equivalent to the percentage of marks as laid down in Clause-16.
- 6. A person who has passed one of the following examinations shall be eligible to join III year (i.e. Part-III) class of B.A./ B.Sc./B.Com./B.Sc. (Home Science) course :
 - a) B.A./B.Sc./B.Com./B.Sc. (Home Science) Part-II examination as the case may be, under new scheme of this University.
 - b) B.A./B.Sc./B.Com./B.Sc. (Home Science) Part-II examination as the case may be, under scheme of other statutory Universities. Provided that the subjects offered for B.A./B.Sc./B.Com./B.Sc. (Home Science) Part-II were the same as are available at this University and the syllabi were not materially different.
 - In case the subject/paper offered for the B.A./B.Sc./ B.Com./B.Sc. (Home Science) Part-II were not the same as are available at this University, the candidate may be

- 7. The examination in Part-I,II & III shall be open to a student who:
 - a) has passed not less than one academic year previously the requisite examination as laid down in Clause-4, 5 & 6 above.
 - In case of a candidate who passed the requisite exam. under the rule relating to compartment the period of one academic year shall be counted from the examination in which he/she is first placed under compartment.
- 7. (a) A candidate who is placed under compartment in one subject only in 10+2 examination of the Board of School Education Haryana, Bhiwani or of any other Board/ University recognised by this University may be allowed provisionally to read for TDC-I exam. and to clear the compartment subject in the Supplementary exams. If he/ she fails to produce/submit the proof of having passed the compartment subject upto 20th Dec.of year of admission to the Principal of the College his/her admission to TDC-I exam. shall stand automatically cancelled.

Provided that a candidate who joins Part-I of B.A./B.Sc./B.Com/B.Sc. (Home Science), as the case may be must have obtained atleast 33%, 35%, 40%, 45% marks in the aggregate (by adding minimum qualifying marks in the compartmental subject) in the Sr. Secondary Certificate Examination (+2 Examination) or an examination recognised equivalent thereto.

A candidate who is placed under compartment/re-appear in one subject only in the lower examination of this University may be allowed to read for the next higher class and to clear the compartment subject in two consecutive chances but if he fails to pass or fails to B.A./B.Sc. I 5

appear for the compartment subject at the second chance his result for the higher examination shall, unless he has passed in that exam., be cancelled and he shall not be allowed to appear for the same till he has passed in the lower examination. If he has passed in the higher examination his result for the same shall be declared provisionally subject to his passing the lower exam. within permissible chances under clause-9.1 as an ex-student.

- b) has his/her name submitted to the Controller of Examinations by the Principal of the College he/she has most recently attended and produces the following certificates signed by the Principal of that college.
 - i) of having remained on the rolls of a recognised college for the academic year preceding the exam:
 - ii) of having satisfactorily performed the work of his/her class:
 - iii) of having attended not less than 1 6, 1, 344,646
 - 75% of the full course of lectures delivered to his/her class in each of the subjects offered, (the course to be counted from the date of admission upto the last date when the classes break up for preparatory holidays, viz. 21 working days before the commencement of the examination); and
 - 2. 75% of the periods assigned to Practical Work in each of the Science subject or Psychology or in the case of Geography Map Work and Practical (the minimum number of periods of Practical Work and in the case of Geography Map Work and Practical required to be arranged by each college shall not be less than 40% in each subject).
 - iv) of having obtained not less than 20% marks in each subject or 25% marks in the aggregate of all the subjects in the half yearly house examination held in November/December with 100 marks for each subject.

- 8. a) A student who is unable to appear in the annual examination due to shortage in attendance and has complied with the requirement in Clause-7(b) (iv) above may be exempted from this requirement while taking the examination in the following year as an ex-student in terms of Clause- 9.1.
 - b) A student who has completed the required percentage of lectures but has failed to comply with the requirements in Clause-7(b) (iv) may be allowed on the recommendation of Principal of the College concerned to appear as an ex-student in the following year.
- 9.1 A student who has completed the prescribed course of instruction in recognised college for I, II, III examination, but does not appear in it or, having appeared fails, may be allowed on the recommendations of the Principal of the college concerned three consecutive chances to appear in the examination as an ex-student without attending a fresh course of instruction.
- 10. A candidate who re-appears in B.A. Part-I examination as an ex-student (in full subjects) may change one of his subjects.
- 11. The amount of examination fee to be paid by a candidate for each part shall be as prescribed from time to time

A candidate taking up a subject which includes a practical examination shall pay an additional fee of Rs. 10/-per subject.

- 12. i) The medium of instruction shall be Hindi/English.
 - ii) The question papers will be set in :
 - a) Hindi in case of Sanskrit.
 - b) the language concerned in case of other language.
 - c) in both Hindi and English in case of other subjects.
 - iii) The candidates shall write their answer in :
 - a) the language concerned in case of English and Modern Indian and Oriental Language except Sanskrit in which case the answer may be written in Hindi; and

B.A./B.Sc. I 7

b) Hindi, English, Punjabi or Urdu in case of other subjects.

- 13.1 The examination shall be held according to the Syllabus prescribed by the Academic Council. A candidate who fails in an examination, or having been eligible fails to appear in an examination shall unless approved otherwise by the Academic Council take the examination as an ex-student according to the Syllabus prescribed by University for regular students appearing for that examination, provided that the Syllabus for the candidates for the compartment/re-appear examination to be held in September/April as the case may be shall be the same as was in force for the regular student in the last Annual Examination.
- 13.2 A candidate for B.A. Examination shall take up Englsih and Hindi/Punjabi/Sanskrit/Urdu as compulsory subjects and two elective subjects in each of three parts. Two elective subjects may be selected from the subjects prescribed for the examination as per syllabus, subject to the following:
 - a) A candidate shall offer Military Science if he is a regular student.
 - b) A candidate shall offer Statistics if he/she offers it alongwith Mathematics/Computer Applications.
 - c) Every candidate shall offer Hindi either as a compulsory subject or as an elective subject.
 - d) Language offered as compulsory subject cannot be offered as an elective subject.
 - e) A candidate shall offer Computer Application with Math., Statistics for B.A. only.
- 13.3 A candidate for B.Sc. examination shall offer one paper of English in the 1st year and one paper of Hindi/Punjabi/Sanskrit/Urdu in the 2nd year. In addition he/she shall be required to offer the subjects of B.Sc. as the case may be, according to the scheme of examination and syllabus approved by the Academic Council.

- 13.4 A candidate for B.Com. Examination shall offer the papers according to the scheme of examination and the syllabus approved by the Academic Council.
- offer one paper of English in the 2nd year and the subject of B.Sc. (Home Science) in the 1st year, 2nd year and 3rd year, according to the scheme of examination and the syllabus approved by the Academic Council.
- Note: A candidate coming from a Non-Hindi speaking area shall if, he/she did not offer Hindi/Punjabi/Sanskrit/Urdu in the examination qualifying for admission, offer in lieu of compulsory Hindi/Punjabi/Sanskrit/Urdu, the subject of Additional English which shall carry the same marks as for Hindi/Punjabi/Sanskrit/Urdu.
- 14. College students offering a U.G.C. Scheme of restructured/ vocational courses, shall be required to take up the combination of traditional and compulsory subjects in each of the TDC Part-I,II &III as mentioned against each course in the Scheme of Examination.
- 15. The minimum number of marks required to pass the examination shall be 35% in each subject in case of B.A./ B.Sc./B.Sc.(Home Science) examination. 35% marks in each paper in case of B.Com. examination. Provided that in a subject in which there is a practical examination, this percentage shall be required separately in written and practical parts (including map work in case of Geography) of the examination. (A candidate of the University who fails in theory or practical or both parts of subject may be allowed to re-appear/compartment in the theory or practical or both parts, as the case may be of that subject).
- 16. The successful candidates shall be classified in three divisions as under:
 - i) those who obtain 60% or more of the aggregate number of marks in all the subjects incuding the compulsory subjects in Part-I,II & III Examination taken together shall be placed in the First Division.

SCHEME OF EXAMINATION FOR B.Sc.(HONS) IN CHEMISTRY

w.e.f. 2002-2003, 2003-2004, 2004-2005

SUBSIDIARY PAPERS

GROUP-A (Non Medical)

Any t	wo o	f the	follow	ving:
-------	------	-------	--------	-------

1.	Mathematics	Theory	2 Papers
ş. '		Practical	1 Paper
2.	Physics	Theory	2 Papers
		Practical	1 Paper
3.	Statistics	Theory	2 Papers
***		Practical	1 Paper
4.	Geology	Theory	2 Papers
s* .		Practical	1 Paper
5 . ,	Electronics	Theory	2 Papers
1. 1824		Practical	1 Paper

GROUP-B (Medical)

Any two of the following:

1.	Botany	Theory	2 Papers
·	*	Practical	1 Paper
2.	Zoology	Theory	2 Papers
		Practical	1 Paper
3.	Anthropology	Theory	2 Papers
		Practical	1 Paper

Note:

1. There will be two subsidiary subjects along with the papers of the main subject in part I and II and in part III there will be only main subject.

2. The students will offer only those subsidiary subjects in Part-II which they have studied in Part-I.

B.Sc. I (Hons.)

Paper - I (Inorganic Chemistry Theory)

Max. Marks: 50

Time: 3 Hours

Note: Examiner will set 10 questions, two from each section and candidate will be required to attempt five question in all selecting one question from each section.

Section-A

Atomic Structure

Historical development of the subject, Bohr's theory and its limitations, idea of de-Broglie matter waves, Heisenberg uncertainty principle, atomic orbitals, Schrodinger wave equation, significance of ϕ and ϕ^2 , quantum numbers,normal and orthogonal wave functions, radial and angular wave functions and probability distribution curves, shapes of s,p, d and f orbitals, Aufbau and Pauli Exclusion principle, Hundle multiplicity rule electronic configurations of the elements, effective nuclear charge.

(10 Hrs.)

Periodic Table and Periodic Properties:

Classifications of elements, s.p.d. and f block elements: the long form of the periodic table.

Atomic and ionic radi, ionization energy, electron afinity and Electro negativity - definition methods of determination of evaluation, trends in periodic table and applications in predicting and explaining the chemical behaviour.

Howard with the work of the

(8 Hrs.)

Section-B

Covalent Bond

Valence bond theory and its limitations, directional characteristics of covalent bond, various types of hybridisation and shapes of simple Inrganic moleules and ions. VSEPR Theory of NH₃, H₃O+, SF₄, CIF₃, ICI₂ and H₂O. MO theory: homonuclear and heteronuclear (CO and NO) diatomic molecules, multicentre bonding in electron deficient molecules, bond strength and bond

energy, percentage ionic character from dipole moment and electronegativity difference.

(10 Hrs.)

Weak Interactions:

Hydrogen bonding: Types, Theory and consequences of Hydrogen Bonding, Vander Waal's Forces.

(3 Hrs.)

Linnett's Theory:

Important features of ERT, spin correlation and charge correlation effect, double quartet approach, Linett formulae of some simple molecules as HF, F,, C,H,, O,, C,H,, N, and CO.

Section - C

Ionic Solids:

lonic structures, types of ions and packing of ions in crystals size effects, radios ratio effects and co-ordination numbers, limitation of radius ration rules, lattice defects, semicondiuctors, Lattice energy and Born-Haber cycle, Solvation energy and solubility of ionic solids, polarizing power and polarizability of ions fajan'a rules. profesional compression of a figure of the f

Metellic Bond

Free electron, valence bond and band theories (Alloys excluded)

s-Block Elements:

Comparative study, diagonal relationships, salient features of hydrides, solvation and complexation tendencies including their function in biosystems, an introduction to alkyls and aryls,

The state of the first page and the state of

p-Block Elements-II

Chemistry of fullereness, carbides, fluorocarbons, silicates (structural principle) tetrasulphur, telranitride basic properties of halogens, interhalogens and polyhalides.

(8 Hrs.)

Section-E

Chemistry of Noble Gases:

intermate color at those for th

Chemistry properties of the noble gases, chemistry of xenon, structure and bonding in xenon compounds.

(3 Hrs.)

Theory of Qualitative and Quantitative Inorgnic Analysis:

Chemistry of analysis of various groups of basic and acidic radicals, chemistry of identification of acid radicals in typical combinations. Chemistry of interferences of acid radicals including their removal in the analysis of basis radicals. Theory of precipitaion, co-precipitation, post-precipitaion, purification of precipitates

Max. Marks: 50

Time: 3 Hrs.

Note: Examiner will set 10 questions, two from each section and candidate will be required to attempt five questions in all selecting one question from each section.

Section-A

Gaseous State

Elementary treatment of gas laws, Real and ideal gases, Boyle's temperature, gasconstant R and its numerical values critical constants and their determination. Kinetic gas equation and its derivation, cause of deviation of gases from ideal behaviour, Vander swall's equation and its deviation under different pvisotherms of real gases, isotherms of carbon dioxide, continuity of states. Relationship between critical constants and vander waal's constants, law of corresponding states. Reduced equation of state, liquification of gases (based on joule - Thomson effect.)

Maxwell's distribution law of vallocities and energies. Root mean square velocity average velocity and most probable velocity and their relationship. Mean free path and its derivation. Collision diameter. Collision number and collision frequency,--viscosity of gases. Relationship between mean free path and coefficient of viscosity, calculation of molecular diameter from coefficient of viscosity, degree of freedom of motion and principle of equipeartition of energy.

(18 Hrs.)

Section-B

Liquid and solid states.

Intermolecular forces, structure of liquids (qualitative description, structural differences between solids, liquids and gases, Liquid crystals, Differences between liquid, crystal solid and liquid, classification structure of nematic and chalastric phases, thermograpy and seven segment of cell, vapour pressure of liquids, Theory of liquids and entropy of vaporization, viscosity and surface tension of liquids.

Crystalline and amorphous solids. Type of unit cells, Laws of crystallography law of constancy of interfaial angeles, law of

rational indices, law of symmetry. Symmetry of elements in crystalls. Seven crystal system, Bravis Lattice Bragg's equation and its determination X-ray diffraction of crystals. Determination of crystal structure of NaCl, KCl, CsCl by Laws and panders methods.

Section-C

Surface Chemistry and Colloidal States:

Adsorption, Absorption. Types of adsorption, difference between them, adsorption isotherms and adsorption isobars. Langmuir adsorptions isothers and freundlieh adsorption isotherms different isotherms, elementary idea of BET equation and its application, Gibb's adsorption equation and its application. Enzyme catalysis and mechanism of enzyme catalysis, Micharlis-Menton equation application of adsorption. Colloids, classification of colloids, solids in liquids (sols) properties: Kinetic, optical and electrical; stability of colloids, protective colloids Hardy-schulze Rule, gold number, Emulsion, types of emulson and their preparation. Emulsifier. Gels (liquid in solids)' classification and properties, inhibition and

18 Hrs.

Section-D

Chemical Equilibrium and catalysis:

general application of colloids.

Types of Reactions (Reversible and irreversible Equilibrium state. Le-Chatelier principle.Law of mass action and its application derive the law of chemical equilibrium. Thermodynomical derivation of law of chemical equilibrium.

Equiliruium constant and free energy function, isotherms and reaction isochor, Classius-Claperon equation and its application.

11 Hrs.

Catalysis

Homogeneous and Heterogeneous catalysis, Enzyme catalysis. Theory of catalysis-Intermediate compund formation theory, adsorption theory, general characteristics of catalysis, positive catalysis, negative catalysis, autocatalysis, shape selective catalysis.

7 Hrs.

Section-E

Theromchemistry and chemical energaties:

Definition of important terms used in thermochemistry. Energy changes during chemical reactions. Derivation of 1st law of thermodynamus. Heat of reaction, enthalpy and enthalpy change. Enthalpy of formation, combusion, neutralisation, solution, vaporisation, sublimation hydration and fusion, calorfic value of foods. Bond energy and its calculation. Hess's law of heat summation and its application for the calculation of various enthalpies or reaction. Kirchhoffs equation, Spontaneous processes. Criteria of spontaneity., entropy and free energy. Why crisis of energy if conserved in nature.

11 hrs.

Physical properties and molecular structure

Addition and constitution properties. Vapour pressure and its determination. Surface tension and its determination, parachor and chemical constitution, viscosity and its determination, viscosity and chemical constitution. Optical activity. Refractive index. Specific and molar refractive index. Determination of refractive index.

7 hrs.

Paper III (Theory) Organic Chemistry

M.M. 50

Time: 3 hrs.

Note: Ten questions will be set, two questions from each section.

The candidate will be required to attempt five questions in all, selecting one question from each section.

SECTION-A

inga maka mangkatan ing ka

Structure and Bonding

5 Hrs

Hybridization, bond lengths and bond angles, bond energy, localized and delocalized chemical bond, van der waals interactions, inclusion compounds, clatherates, charge transfer complexes, resonance, hyperconjugation, aromaticity, inductive and field effects, hydrogen bonding.

Mechanism of Organic Reactions

8 Hrs.

Curved arrow notation, drawing electron movements with arrows, half-headed and double-headed arrows, homolytic and heterolytic bond breaking. Types of reagents- electrophiles and nucleophiles.

Types of organic reactions. Energy considerations.

Reactive intermediates -carbocations, carbanions, free radicals, carbenes, arynes and nitrenes (with examples). Assigning formal charges on intermediates and other ionic species.

Methods of determination of reaction mechanism (product analysis, intermediates, isotope effects, kinetic and stereochemical studies).

Purification of Organic Compounds

Paper, thin layer, column and gas chromatographic techniques, criteria of purity of organic substances.

5 Hrs.

SECTION-B

Stereochemistry of Organic Compounds

18Hrs

Concept of isomerism. Types of isomerism.

Optical isomerism-elements of symmetry, molecular chirality, enantiomers, stereogenic centre, optical activity, properties of enantiomers, chiral and achiral molecules with two stereogenic centres, diastereomers, threo and crythro diastereomers, meso compounds, resolution of enantiomers, inversion, retention and racemization.

Relative and absolute configuration, sequenmoe rules, D & 1 and R & S systems of nomenclature.

Geometric isomerism - determination of configuration of geometrical isomers. E & Z system of nomenclature, geometrical isomerism in oximes and alicyclic compounds.

Conformational isomerism - conformational analysis of entane and n-butane, conformations of cyclohexane, axial and equatorial bonds, conformation of mono substituted cyclohexan derivatives. Newman projection and Sawhorse formulae, Fisher and flying wedge formulae.

Difference between configuration and conformation.

Asymmetric synthesis, elementary idea of stereospecific and stereoselective reactions, Atropisomerism (biphenyles and allenes).

SECTION - C

Alkanes and Cycloalkanes

7 hrs.

IUPAC nomenclature of branched and unbranched alkanes, the

alkyl gropu, classification of carbon atoms in alkanes. Isomerism in alkanes, sources, methods of formation (with special reference to Wortz reaction, Kolbe reaction, Corey-House reaction and decarboxylation of carboxylic acids), physical properties and chemical reactions of alkanes.

Mechanism of free radical halogenation of alkanes: orientation, reactivity and selectivity.

Cycloalkanes - nomenclature, synthesis of cycloalkanes and their derivatives - addition of carbenes to olefines, Simmons - Smith reaction, photochemical (2+2) cycloaddition reactions, Diels-Alder reaction, dehalogenation of $\alpha, \omega-$ dihalides, Dieckan cyclization, pyrolysis of calcium or barium salts of dicarboxylic acids, Blanc's rule, Thorpe-Ziegker reactuib, Demjanov rearrangement and by the use of malonic ester and acetoacetic ester,chemical reactions, Baeyer's strain theory and its limitations. Ring strain in small rings (cyclopropane and cyclobutane), theory of strainless rings. The case of cyclopropane ring : banana bonds.

Alkenes 5 Hrs.

Nomenclature of alkenes, methods of formation, mechanisms of dehydration of alcohols and dehydrohalogenation of alkylhalides, regioselectivity in alcohol dehydration. The Saytzeff rule, Hofmann elimination, physical properties and relative stabilities of alkenes. Chemical reactions of alkenes - mechanisms involved in hydrogenation, electrophilic and free radical additions, Markownikoff's fule, hydroboration-oxidation, oxymercuration-reduction Epoxidation, ozonolysis, hydration, hydroxylation and oxidation with KMnO₄, polymerization of alkenes, substitution at the allylic and vinylic positions of alkenes.

Industrial applications of ethylene and propene.

Coal, petroleum and petrochemicals:

٣

6 Hrs.

Coal tar distillation and coal tar chemicals, petroleum origin, fractionation cracking, reforming and aromatisation, petrochemicals, synthetic fuels, octane and cetane numbers, antiknock additives.

SECTION - D

Cycloalkenes, Dienes and Alkynes

7 Hrs.

Methods of formation, conformation and chemical reactions of cycloalkenes.

Nomenclature and classification of dienes: isolated, conjugated and comulated dienes. Structure of allences and butadiene, methods of formation, polymerization. Chemical reactions - 1,2 and 1,4 additions. Diels - Alder reaction.

Nomenclature, structure and bonding in alkynes. Methods of formation. Chemical reactions of alkynes, acidity of alkynes. Mechanism of electrophilic and nucleophilic addition reactions, hydroboration-oxidation, metal-ammonia reductions, oxidation and polymerization.

Arenes and Aromaticity - I

5 Hrs

Nomenclature of benzene derivatives. The anyl group. Aromatic nucleus and side chain. Structure of benzene: molecular formula and Kekule structure. Stability and carbon-carbon bond lengths of benzene, resonance structure, MO picture.

Aromaticity: the Huckel rule, aomatic ions, annulenes up to 10 carbon atoms, aromatic, anti-aromatic and non - aromatic compounds.

Poly Nuclear Hydrocarbons

6 Hrs

Haworth synthesis of naphthalene and phenanthene, pschorf synthesis of phenanthrene, synthesis of anthrancene involving Friedal crafts acylation of benzene with phthalic anhydride and Diels Alderreaction between 1,3 butadiene and 1,4 naphtahaquinone, reaction of naphthalene, anthrancene and phenanthrene, relative reactivities at different positions and mechanism of electrophilic substitution reactions in naphthalene, anthrancene and phenanthrene.

SECTION - E

Arehes - II

4 Hrs.

Aromatic electrophilic substitution - general pattern of the mechanism, role of σ - and π - complexes, mechanism of nitration, halogenation, sulphonation, mercuration and Friedel-Crafts reaction. Energy profile diagrams. Activating and deactivating substituents, orientation and ortho/para ratio, Side chain reactions of benzene derivatives, birch reduction. Methods of formation and chemical reactions of alkylbenzenes, alkynylbenzenes and biphenyl.

record, aside in mentile ontransmetablishes thave

Alkyle and Aryl Halides

14 Hrs.

Nomenclature and classes of alkyl halides, methods of formation, chemical reactions. Mechanisms and stereochemistry of nucleophilic substitution reactions of alkyl halides, S,2 and S,1 reactions with energy profile diagrams. Study of elimination reactions in alkyl halides, E; and E, mechanism, substitution vs. elimination, factors affecting substitution/elimination.

Polyhalogen compounds: chloroform carbon tetrachloride.

Methods of formation of arhl halides, nuclear and side chain reactions. The addition-elimination and the elimination-addition mechanisms of nucleophilic aromatic substitution reactions.

Relative reactivities of alkyl halides vs allyl, vinyl and aryl halides. Synthesis and uses of DDT and BHC.

Paper - IV

Inorganic Chemistry Practicals:

M.M.:25

Time: 4 hrs.

Semimicro qualitative analysis of mixture containing not more than four radicals (including interfering and excluding insoluble):

Pb2+,Hg2+,Hg2+,Ag+,Bi3+,Cu2+,As3+,Sb3+,Sn2+,Fe3+,Cr3+, Al3+, Co2+, Ni2+, Mn2+, Zn2+, Ba2+, Sr2+, Ca2+, Mg2+, NH,+, CO_3^2 , S^2 , SO_3^2 , $S_2O_3^2$, NO_2 , CH_3COO , CI, Br, I, NO_3 , SO₂², C₂O₂², PO₃³, BO₃³

- Volumetric Analysis:
- a) to Acid base titrations (Combinations of strong and weak SE MEDICAL PROPERTY. acids and bases).
- Oxidation reduction titrations (Using KMnO₄ and K₂Cr₂O₇) b) Practical

Physical Chemistry Practicals 1000 Time: 4 Hrs. Thermochemistry a some reschalation and test the second second

อดบองวรษา เมื่อนั้น

Determination the solubility of different salts (benzoic (i) Acid) and determination of heat of dissolution.

- (ii) Determination of enthalpy of neutralisation (strong acid vs strong base, weak acid vs. strong base).
- (iii) Determination of enthalpy of solution and calculations of lattice energy by Born Haber Cycle.

Colloids:

To prepare As₂S₃ sol and comparing its precipitating power by mono, di and trivalent ions.

Viscosity and Surface tension

- 1. To determine percentage composition of the given binary mixture by viscosity method.
- To determine the viscosity of amyl alcohol at different concentraction and calculate the excess viscosity oft these solution.
- 3. To determine the percentage composition of a given binary mixture by surface tension method.

Solution

To determine critical solution temperature

- (i) Water phenol system.
- (ii) Water aniline system.

Adsorption:

To study adsorption of acetic acid on the surface of activated animal charcoal.

(Paper-VI) Organic Chemistry Pratical

Max. Marks: 25

Time: 3 hrs.

- 1. Preparation and purification through crystallization or distillation and ascertaining their purity through melting point or boiling point.
 - (i) Lodoform from ethanol (or acetone)
 - (ii) M-Dinitrobenzene from nitrobenzene (use 1:2 conc. HNO₃ H₂SO₄ mixture if fuming HNO₃ is not available).
 - (iii) P-Bromoacetanilide from acetanilide.
 - (iv) Benzoic and from toluene

- (v) Aniline from nitobenzene
- (vi) M-Nitroaniline from-dinitrobenzene

. Caldsie 42 has

- (vii) Pheni benzoate from phenol and benzoyl chloride
- (viii) Ethyl benzoate from benzoic acid and ethanol
- (ix) Methl orange (azo dye)
- 2. To study the process of (I) sublimation of camphor and phthalic acid, (ii) decolorisation of brown sugar, (sucrose) with animal charcol.
- 3. Differential extraction.

B.Sc. Part - II (Hons) Chemistry Paper - VII (Theory) Inorganic Chemistry

Max. marks: 50 Time: 3 hrs.

NOTE: Examiner will set 10 questions, two from each section and candidate will be required to attempt five questions in all selecting one question from each section.

Section - A

General Principles of Metallurgy:

. General principles of metallurgy, occurrence of metals with special emphasis on mineral wealth of India, calcination, roasting, smelting, bessimerization, various methods of concentration, purification and refining (such as parting process, zone refining, oxidation refining, electrolytic refining and solvent extration) metallurgy of important metals like Ag, Au, Zn, Cu, Ni..

12 Hrs.

Non-aqueous solvents

Physical properties of solvent, types of solvents and their general characteristics, reactions in non-aqueous solvents with reference to liquid NH₂ and liquid SO₂.

6 Hrs.

Section - B

Chemistry of Elements of First Transition Series

Characteristic properties of d-block elements. Properties of the elements of the first transition series, their binary compounds and complexes illustrating relative stability of their oxidation states, coordination number and geometry. Chemistry of Ti, V, Cr, Mn, Fe and Co in various oxidation states.

18 Hrs.

Section - C

Chemistry of Elements of Second and Third Transition Series

General characteristics, comparative treatment with their 3danalogues in respect of ionic radii, oxidation states, magnetic behaviour, spectral properties and stereochemistry. Chemistry of Mo and W in different oxidation states, aqueous chemistry of Mo and W(VI), isopoly molybedates and isopolytungustates.

18 Hrs.

Section - D

Co-ordination Compounds:

Werner's coordination theory and its experimental verification, effective atomic number concept, chelates, nomenclature of coordination compounds isomerism in coordination compounds, valence bond theory of transition metal complexes.

Acids and Bases:

Arrhenius, Bronsted-Lowry, the Lux-Flood, solvent system and Lewis concepts of acids and bases relative strength of acids and bases, the levelling effect.

18 Hrs.

Section - E

Chemistry of Lanthanide Elements:

Electronic structure, oxidation states and ionic radii and lanthanide contraction, complex formation, occurrence and isolation, lanthanide compounds.

6 Hrs.

Chemistry of Actinides:

General features and chemistry of actinides, chemistry of separation of Np, Pu and Am from U, similarities between the later actinides and the later lanthanides.

4 Hrs.

Oxidation and Reduction:

Use of redox potential data - analysis of redox cycle, redox stability in water - Frost, Latinmer and Pourbaix diagrams, Principles involved in the extraction of elements.

8 Hrs.

B.Sc. (Hons) IInd Year Paper VIII (Theory) Physical Chemistry

Max. Marks: 50 Time: 3 hrs.

Note: Examiner will set 10 questions, two from each section and candidate will be required to attempt five questions in all selecting one question from each section.

Section - A

Thermodynamics-I

Important terms used in thermodynamic system, surrounding, type of system intensive and extensive property, state and path function and their differentials, thermodynamic equilibrium thermodynamic process, concept of heat and work, first law of thermodynamics, (statement and derivation). Internal energy and enthalpy, internal energy and enthalpy change and their realtion. Heat capacity. Heat capacity at constant volume and pressure and their relationship. Joule- Thomson effect and inversion temperature, calculation of W, Q, dv and the expansion of ideal gas under isothermal and adiabatic conditions for reversible processes.

18 hrs.

Section -B

Thermodynamics - II

Second law of thermodynamics. Need of the law, different definitions of the law, Carnot Cycle and its efficiency. Carnot

theorem. Thermodynamic scale of temperature. Concept of entropy, entropy as a state function of V and T, entropy as a function of P and T. Entropy change in physical processes. Clausius inequility. Entropy as criteria of spontaneity and equilibrium. Entropy change in ideal gases and mixing of gases, work function, Gibb,s free energy function. Gibbs function (G) and Helmholtz function (A) as thermodynamic function. Criteria of spontaneity of reversible processes in terms of enthalpy change, entropy change, work function and free energy function. Variation of G and A with P,V and T.

Gibb Helmholtz equation and its application, clausius- clapeyron equation.

18 hrs.

Section - C

Chemical Kinetics

Chemical kinetics and its scope, Rate of reaction, factors influencing the rate of reaction. Concentration, temperature, pressure, solvent, light, catalyst, concentration dependence of rates. Mathematical characteristics of simple chemical reactions, molecularity and order of reaction. Zero order ,Ist order ,second order, third order reactions and their mathematical derivations for their rate constants. Half life period, average life period, determination of order reaction. Differential method, method of integration. Method of half life period and isolation method. Pseudo unimolecular reactions, Experimental methods of chemical kinetics: conductometric, potentiometric, optical method, polarimetery and spectrophotometer. Theories of reaction rates, effect of temperature on rate of reaction. Simple collision theory based upon transition state, hard sphere model theory (equilibrium hypothesis). Expression for the rate constants based on equilibrium constant their thermodynamic aspect.

18 hrs.

Section - D

Electrochemistry-I

Electrical transport conduction in metal and in electrolyte solutions, specific conductance and equivalent conductance. Measurement of equivalent conductance. Variation of equivalent conductance and specific conductance with dilution, migration of ions, Kohlrausch's law, Arhenious theory of electrolyte dissolution and its limitations. Weak and strong electrolytes. Ostwold's dilution law and its uses and limitation. Debye-Huckel onsager equation for strong electrolytes (elementary treatment only), transport number and its determination by Hittorf and moving boundary method. Application of conductivity measurements, determination of solubility product of spraningly soluble salts. Determination of degree of dissolution, Ka for weak acids.

18 hrs.

Section - E

Electrochemistry-II

Redox reactions, electrolytic and galvanic cells. Reversible and irreversible cells reversible electrodes, types of reversible electrodes, metal electrodes, gas metal electrode, metal insoluble salt on ions and redox electrodes, electrode reactions, cell voltage, function of salt bridge, electrode potential and its determination. Standard hydrogen electrode, reference electrode, standard cell, sign convention. Electrochemical series and its significance.

Nernst equation for a reversible electrode and cell. Calculation of thermodynamic quantities of a cell reaction ΔG , ΔH and K. Polarisation over potential and hydrogen over voltage. Definition of pH. Determination of pH using hydrogen, quinhydron and glass electrode by potentiometric method. Buffers solution, Buffer action, Henderson - Hazel equation. Hydrolysis of salts, corrosion, types, theories and methods of controlling it.

18 hrs.

B. Sc.(Hons.) II Year Paper IX(Theory) Organic Chemistry

Max. marks: 50

Time: 3 Hrs.

NOTE: Ten questions will be set, two questions from each section. The candidate will be required to attempt five questions in all, selecting one question from each section.

SECTION-A

Electromagnetic Spectrum: Absorption Spectra

18 Hrs

Ultraviolet (UV) absorption spectroscopy — absorption laws (Beer-Lambert law), molar absorptivity, presentation and analysis of UV spectra, types of electronic transitions, effect of conjugation. Concept of chromophore and auxochrome. Bathochromic, hypsochromic, hyperchromic and hypochromic shifts. Woodward-Fieser rules, calculation of λ_{max} of simple conjugated dienes and α,β -unsaturated ketones. UV spectra of conjugated enes, enones, dienones, α,β -unsaturated acids, unsaturated esters, lactones, α,β -unsaturated amides and lactams.

Infrared (IR) absorption spectroscopy — molecular vibrations. Hooke's law, selection rules, intensity and position of IR bands, measurement of IR spectrum, fingerprint region, characteristic absorptions of various functional groups and interpretation of IR spectra of simple organic compounds. Hydrocarbons (saturated and unsaturated), hydroxy compounds, aldehydes, ketones; eseters, anhydrides, amides, amines and nitrocompounds. Applications of UV and IR spectroscopy in structure elucidation of organic compounds.

SECTION - B

Alcohols 12 Hrs

Classificati on and nomenclature:

Monohydric alcohols — nomenclature, methods of formation by reduction of aldehydes, ketones, carboxylic acids and esters. Hydrogen bonding. Acidic nature. Reactions of alcohols. Industrial manufacture of methanol (from CO and H₂) and ethanol (flow sheet diagram).

Dihydric alcohols — nomenclature, methods of formation, chemical reactions of vicinal glycols, oxidative cleavage [Pb(OAc)₄ and HIO₄] and pinacol-pinacolone rearrangement.

Trihydric alcohols — nomenclature and methods of formation, chemical reactions of glycerol.

Phenols 6 Hrs

Nomenclature, structure and bonding. Preparation of phenols, physical properties and acidic character. Comparative acidic strengths of alcohols and phenols, resonance stabilization of phenoxide ion. Reactions of phenols — electrophilic aromatic substitution, acylation and carboxylation. Mechanisms of Fries rearrangement, Claisen rearrangement, Gatterman synthesis, Hauben-Hoesch reaction, Lederer-Manasse reaction and Reimer-Tiemann reaction.

SECTION - C

Aldehydes and Ketones

18Hrs

Nomenclature and structure of the carbonyl group. Synthesis of aldehydes and ketones with particular reference to the synthesis of aldehydes from acid chlorides, advantage of oxidation of alcohols with chromium trioxide (Sarett reagent)

pyridinium chlorochromate (PCC) and pyridinium dichromate. Synthesis of aldehydes and ketones using 1,3-dithianes. Gatterman aldehyde synthesis, Gatterman Koch reaction, synthesis of ketones from nitriles and from carboxylic acids. Physical properties, Comparison of reactivities of aidehydes and ketones. Mechanism of nucleophilic additions to carbonyl group with particular emphasis on benzoin, Aldol, Perkin and Knoevenagel condensations. Condensation with ammonia and its derivatives. Wittig reaction. Mannich reaction, Michael reaction.

Use of acetals as protecting group. Oxidation of aldehydes, Bacyer-Villiger oxidation of ketones, Cannizzaro reaction. MPV. Clemmensen, Wolff-Kishner, LiAlH₄ and NaBH₄ reductions. Halogenation of enolizable ketones.

An introduction to α,β - unsaturated aldehydes and ketones.

SECTION - D

Ethers and Epoxides

3 Hrs

Nomenclature of ethers and methods of their formation, physical properties. Chemical reactions — cleavage and autoxidation, Ziesel's method.

Synthesis of epoxides. Acid and base-catalyzed ring opening of cpoxides, orientation of epoxide ring opening, reactions of Grignard and organolithium reagents with epoxides.

Carboxylic Acids

12 Hrs

Nomenclature, structure and bonding, physical properties, weithing of carboxylic acids, effects of substituents on acid scrength. Preparation of carboxylic acids. Reactions of carboxylic acids. Hell-Volhard-Zelinsky reaction. Synthesis of acid chlorides, esters and amides. Reduction of carboxylic acids. Mechanism of decarboxylation.

-Methods of formation and chemical reactions of halo acids Hydroxy acids: malic, tartaric and citric acids.

Methods of formation and chemical reactions of unsaturatedmonocarboxylic acids. Industrial manufacture of acetic acid and benzoic acid(flow sheet diagram).

Dicarboxylic acids: methods of formation and effect of heat and dehydrating agents.

Carboxylic Acid Derivatives

. 3 Hrs.

Structure and nomenclature of acid chlorides, esters, amides (urea) and acid anhydrides. Relative stability of acyl derivatives. Physical properties, interconversion of acid derivatives by nucleophilic acyl substitution.

Preparation of carboxylic acid derivatives, chemical reactions.

Mechanisms of esterification and hydrolysis (acidic and basic).

SECTION - E

Organic Compounds of Nitrogen

18Hrs

Preparation of nitroalkanes and nitroarenes. Chemical reactions of nitroalkanes. Mechanisms of nucleophilic substitution in nitroarenes and their reductions in acidic, neutral and alkaline media. Picric acid.

Halonitroarenes: reactivity

Structure and nomenclature of amines, physical properties.

Stereochemistry of amines. Separation of a mixture of primary secondary and tertiary amines. Structural features affecting basicity of amines. Amine salts as phase-transfer catalysis. Preparation of alkyl and aryl amines (reduction of nitro compounds, nitriles, reductive amination of aldehydic and ketonic compounds. Gabriel-phthalimide reaction, Hofmann bromamide reaction.

Reactions of amines, electrophilic aromatic substitution in any amines, reactions of amines with nitrous acid:

Diazonium Salts: Mechanism of diazotisation, structure of benzene diazonium chloride, Replacement of diazo group by H, OH, F, Cl, Br, I, NO₂ and CN groups, reduction of diazonium salts to hyrazines, coupling reaction and its synthetic application. Preparation and reactions of cyanides, and isocyanides, urea and diazomethane.

Paper - X Inorganic Chemistry Practical

Max. Marks: 25

Time: 4 hrs.

Practicals 15 marks
Viva-Voce 05 marks
Laboratory 05 marks
Records

Volumetric Analysis

- a) Determination of acetic acid in commercial vinegar using NaOH
- b) Determination of alkali content antacid tablet using HCl
- c) Estimation of calcium content in chalk as calcium oxalate by permanganometry.
- d) Estimation of hardness of water by EDTA
- e) Estimation of ferrous and ferric by dichromate method.
- f) Estimation of copper using thiosulphate.
- g) Determination of chloride ion by Mohr's Method & Volhard's method.

Gravimetric Analysis

- i) Aluminium as oxinate
- ii) Mg as MgNH₄ PO₄ 6H₂O
- iii) Ba as BaSO,
- iv) Nickel as (dimethyl glyoxime)
- v) Copper as thiocyanate

Paper - XI

Physical Chemistry Practicals

Max. Marks: 25
Time: 4 hrs.

Chemical Kinetics

- (i) To determine the specific reaction rates of hydrolysis of ethyl/methyl ester catalysed by hydrogen ion at room temperature.
- (ii) To study the effect of acid strength on the hydrolysis of ester.
- (iii) Kinetics of decomposition of H₂O₂.

Electrochemistry

- i) Determination of pH of a solution.
- ii) Strength of acid by pH measurement
- iii) Determination of transition temperature of a given substance by thermometric method.

Refractive Index:

- i) To determine the refractive index of given liquid and calculation of specific and molar refractivity.
- ii) Determination of concentration of binary mixture by measurement of refractive index.

Electrochemical Cell:

Setting of a Galvanic Cell and determination of cell voltage.

B.Sc. (Hons.) IInd Year (PAPER XII) Organic Chemistry Practical

Max. Marks: 25 Time: 3 hrs

- 1. Systematic identification (detection of extra elements, functional groups, determination of melting point or boiling point and preparation of at least one pure solid derivative) of the following simple mono and bifunctional organic compounds. Naphthalene, anthracene, acenaphthene, benzyl chloride, p-dichlorobenzene, m-dinitrobenzene, p-nitrotoluene, resorcinol, hydroquinone, α-naphthol, β-naphthol, benzophenone, ethyl-methyl ketone, benzaldehyde, vanillin, oxalic acid, succinic acid, benzoic acid, salicyclic acid, aspirin, phthalic acid, cinnamic acid, benzamide, urea, acetanilide, benzamide, aniline hydrochloride, p-toluidine, phenyl salicylate (salol), glucose, fructose, sucrose, o-,m-, p-nitroanilines, thiourea.
- 2. Equivalent weight of acid (neutralization and silver salt method).
- 3. Estimation of phenol (bromide- bromate method) and aniline (bromide bromate and acetylation method).

B.Sc. III (Hons.) Chemistry Paper -XIII Inorganic Chemistry (Theory) - I

Max. Marks: 50 Time: 3 Hrs.

NOTE: Examiner will set 10 questions, two from each section and candidate will be required to attempt five questions in all selecting one question from each section.

Section - A

Hard and Soft Acids and Bases (HSAB)

Classification of acids and bases as hard and soft. Pearson's HSAB concept, acid-base strength and hardness and softness. Symbiosis, theoretical basis of hardness and softness, electronegativity and hardness and softness.

7 Hrs.

Metal - ligand Bonding in Transition Metal Complexes:

Limitation of valence bond theory, an elementary idea of crystal-field theory, crystal field splitting in octahedral, tetrahedral and square planar complexes, factors affecting the crystal-field parameters.

10Hrs.

Section - B

Magnetic Properties of Transition Metal complexes:

Types of magnetic behaviour, methods of determining magnetic susceptibility, spin-only formula. L-S coupling, correlation of μ s and μ eff values, orbital contribution to magnetic moments, application of magnetic moment data for 3d-metal complexes.

7 Hrs.

Thermodynamic and Kinetic Aspects of Metal Complexes:

A brief outlines of thermodynamic stability of metal complexes and factors affecting the stability, substitution reactions of square planar complexes.

5 Hrs.

Electron Spectra of Transition Metal Complexes:

Types of electronic transitions, selection rules of d-d transitions, spectroscopic ground states, spectrochemical series, Orgel - energy level diagram for d¹ and d⁹ states, discussion of the electronic spectrum of [Ti (H₂O)₆]³⁺ complex ion.

Section - C

7 Hrs.

Organometallic Chemistry:

Definition, Nature of Metal Carbon bond, classification of organometallic compounds by bond types viz. I)covalent ii) Ionic iii) Electron deficient iv) cluster compounds v) π bond compounds including sandwitch derivatives. Structure and bonding in Metal carbonyls, cyclopentadienyl derivative, metalethylenic, metal-acetylenic complexes, Applications of organometallic compounds as homogeneous catalysts in hydrogenation, hydroformylation, polymerization, oligomerization and metathesis reactions of alkenes and alkynes (Ziegler - Natta polymerization of ethylene and propylene.)

20 Hrs.

Section - D

Bio-Inorganic Chemistry:

Essential and Trace elements in biological processes, bioinorganic themistry of haemoglobin and myoglobin, vitamin B_{12} , carboxypeptidase A and chlorophyll; biological role of alkali and alkaline earth metal ions with notrogen fixation (special reference

to Ca²⁺. Medicinal aspects of some metal complexes - platinum metal complexes as anticancer agents and their probable mechanism, anticancer activity of Cu, Co and Au complexes. Antibacterial and antiviral activity of metal complexes.

20 Hrs.

Section - E

Silicons, Phosphazenes and S - N compounds:

Synthesis, properties, nature of bonding, structures and applications.

10 Hrs.

Corrosion and Passivity:

Theories of corrosion, prevention of corrosion of metals, passivity.

4 Hrs.

Paper - XIV Inorganic Chemistry - II

Max. Marks: 50

Time: 3 Hrs.

NOTE: Examiner will set 10 questions, two from each section and candidate will be required to attempt five questions in all selecting one question from each section

Section - A

Analytical Chemistry:

Sources of errors in chemical analysis, classification of errors. precision, accuracy, statistical evaluation and interpretation of results in analytical chemistry (with numericals).

7 Hrs.

Organic Reagents in Inorganic Analysis:

Criteria for choice of organic reagents, use of following reagents in inorganic analysis: DMG, cupferron, 8-hydroxyquinoline, Nitroso β - naphthol, EDTA, Acetylacetone, dithiozone, dithiocarbamate. Advantages and disadvantages of organic reagents in inorganic analysis.

10 Hrs.

Section - B

Solvent Extraction:

Basic principles of solvent extraction, classification and mechanism of extraction, extraction equilibria, techniques of extraction and applications in analytical chemistry.

6 Hrs.

Ion - Exchange:

Characteristics of ion-exchangers, mechanism of ion-exchange, ion-exchange equilibra, plate theory for ion-exchange, techniques of ion-exchange and applications of ion exchange for separations.

6 Hrs.

Chromatography:

Classification of chromatographic methods, chromatographic terminology - Rf value, partition co-efficient, dynamics of chromatography, basic principles of adsorption and partition chromatography, applications.

7 Hrs.

Section - C

Nuclear and Radio- Chemistry

Composition of Nuclei, structure of nucleus, forces operative within nucleus, nuclear stability and mass energy equivalence (binding energy). Nuclear reactions: Types of nuclear reactions, the compound nucleus theories, thermonuclear reactions including fusion and fission reactions, radiation detection and measurement:

gaseous ion collection methods (G.M., ionisation and proportional counters) scientillation counter, semi - conductors detectors.

Tracers in Chemistry

Activation analysis, isotopic dilution analysis and radiometric titrations.

18 Hrs.

Section - D

Air Pollution:

Primary and secondary pollutants, sources, pollution effects and control of the following: gaseous hydrocarbons, carbon monoxide, carbon dioxide, hydrogen sulphide, oxides of sulfur and nitrogen and ozone, mechanism of photochemical smog formation; Air purification by micro organisms, Acid rain.

8 Hrs

Water Pollution

Types of water pollution, sources of water pollution, approaches to prevent and control water pollution.

8 Hrs.

Industrial Wastes and treatment processes:

Introduction, characteristics of industrial wastes, types of industrial wastes, principles of industrial waste treatment and disposal of industrial wastes.

5 Hrs.

Section -E

Crystal Structure:

Structures of binary compounds such as zinc blende, wurtzite, NiAs, CsCl, CaF₂, rutile, β-Crystobalite, CdI₂, Bil₃, ReO₃, corrundum and Mn₂O₃, factors affecting crystal structures.

8 Hrs.

Inorganic Polymers:

Definition, classification, polymers based on hetroatomic structure PON polymer, polythiazyl, synthetic inorganic fibres Coordination polymers.

7 Hrs.

B.Sc. (Hons.) Part-III Chemistry Paper-XV Physical Chemistry-I (Theory)

Max. Marks: 50 Time: 3 hrs.

Note: Examiner will set 10 questions, two from each section and candidate will required to attempt five questions in all selecting one question from each section.

Section - A

Thermodynamics:

Nernst heat theorem. Third law of thermodynamics and its applications. Partial molar quantities. Chemical potential. Gibb's Duhem equation. Gibb,s adsorption equation and its application, variation of chemical potential with temperature and pressure.

8 hrs.

Statistical Thermodynamics

Statistical thermodynamics of Maxwell Boltzmann distribution law. Maxwell-Boltzmann law and the concept of negative temperature, Maxwell-Boltzmann law of distribution of energy and velocity (evaluation of energy). Derivation of equation of states for a monoatomic ideal gas.

10 hrs.

Section -B

Phase equilibrium

Statement and meaning of the terms phase, component and degree

of freedom. Phase rule and its thermodynamic derivation, phase equilibria of one component system, water and sulfur system, phase equilibria of two component system, solid-liquid equilibria, simple eutetic (Bi-Cd; Pb-silver system), De-solverisation of lead. Solid solution: Compound formation with congruent melting point (Mg-Cu)and incongruent melting point (Nacl-Cu) (FeCl, and CuSO, - H₂O) system freezing mixture, acetone, dry ice.

18 hrs.

Section -C

Liquid

Liquid mixture, Rault's law, Hanry's law, Non-ideal system, Azetrope HCl-H₂O and ethanol - H₂O system, partially miscible liquid, phenol-water, Trimethylamine-water. Nicotine-water system. Lower and upper consulate temperature. Effect of impurity on consulate temperature immiscible liquids, steam distillation.

8 hrs.

Distribution Law

Nernst distribution law, Thermodynamic derivation of Nernst distribution law. Conditions for the validity of Nernst distribution law. Derivation of molecular complexity from distribution law. Application of distribution law i.e. calculation of solubility of solute in solvent ,determination of extent of association and dissociation of solute in the solvent, distribution indicator, process of extraction and determination of degree of hydrolysis and study of complex ion formation.

- 10 hrs

Section -D

Black Body Radiation and Molecular orbitals theory

Planck's law, heat capacity of solids, Bohr's model of hydrogen atom (derivation excluded) and its defects. Compton effect, molecular orbital theory, basic idea, criteria for forming molecular orbital from atomic orbitals. Construction of molecular orbital by linear combination of atomic orbital, $-H_2$ ion. Calculation of energy levels from wave function, physical picture of bonding and antibonding wave function. Concept of π , π^* orbitals and their characteristics. Hybrid orbital (Sp. Sp² and Sp³.). Calculation of co-efficients of atomic orbitals used in these hybrid orbitals. Introduction of valence bond model of H_2 , comparison of molecular orbital, and valence bond, model.

18 hrs.

Section-E

Nuclear Chemistry and Radioactivity:

Nature of radiation from radioactive substances nuclear structure and nuclear properties. Nuclear reaction, radioactive disintegration series, kinetics of radioactive disintegration. Artificial transmutation of elements. Nuclear fission and nuclear fusion. Radio-carbon dating, synthetic elements. Composition of nuclei:forces operating within the nucleus, nuclear stability and mass energy. Types of nuclear reaction. The compound nuclear theory, scintillation counters. Activation analysis. Isotopic dilution and radioactive titration. Application

11 hrs

Quantum Mechanics:

Dual nature of matter and light. Photoelectric effect ,De-Broglie equation. Heirsenberg's uncertainty principle, Schrodinger wave equation and its significance. Physical inter-pretation of the wave function. Postulates of quantum mechanics. Particle in one and three dimensional box.

7 hrs.

B.Sc. (Hons.) Part-III Chemistry Paper-XVI Physical Chemistry-II (Theory)

Max. Marks: 50 Time: 3 hrs.

Section-A

Polymers Chemistry

Polymerisation, classification of polymers, natural and synthetic polymers. General methods of preparation, addition and condesation polymers. Number average molecular weight, Weight average molecular weight. Determination of molecular weight by osmotic pressure method, viscosity method, light scattering method, kinetics of condensation polymerisation, kinetics of cationic, anionic and condensation polymerisation. Copolymerisation.

18 hrs.

Section-B

Rotational Spectroscopy

Introduction of electromagnatic radiations, regions of the spectrum, basic features of different spectrometers. Statement of the Born-Openheimer approximation, degree of freedom. of diatomic molecule. Energy level of a rigid rotor (semiclassical principle) selection rule, spectral intensity. Distribution using population distribution (Maxwell-Boltzmann distribution) determination of bond length, qualitative description of non-regid rotator. Isotopic effect.

9 hrs.

Vibrational Spectroscopy

Infrared spectrum: energy levels of simple harmonic oscillator. Selection rule. Pure vibration spectrum. Intensity determination of force constant and qualitative relation of force constant and bond energies, effect of anbhormononic motions and isotope on the spectrum. Idea of vibrational frequencies of different functional gp, rotational - vibration spectrum. Calculation of energy of levels and selection rule.

9 hrs.

Section - C

Raman Spectroscopy

Quantum theory of Raman effect. Classical theory of Raman effect. Pure rotational Raman spectra. Raman activity of vibration. Vibration Raman spectra. Rotation - vibration Raman spectrum. Polarisation of light and Raman effect. Experimental technique. Application of Raman effect. Elementary idea of nuclear magnetic resonance. Coupling constant. Chemical shift.

9 hrs.

Electronic Spectra

Concepts of potential energy curves for bonding and antibonding molecular orbitals. Qualitative description of selection rule. Franck-condon principle. Qualitative description of, π and δ orbitals and their energy level and their respective transition. Elementary idea of electron spin resonance spectroscopy. Application of ESR spectroscopy.

9 hrs.

Section-D

Photo Chemistry:

Interaction of radiation with matter. Photo chemical reactions and their difference with thermal reaction law of photo chemistry. Grothus, Drapper law Stark Einstin law, Lambert law, Beer's law. Jablonski diagram depicting various processes occuring in the excited state. Qualitative description of Fluorescence, phosphorescence non-radiation processes (internal conversion, inter system crossing) quantum yield, photosensitised reactions, energy transfer processes (some simple examples.)

12 hrs.

Chromatography

Classification of chromatographic methods, principle of differential migration, nature of differential migration. Adsorption phenomenon, nature of adsorpent, solvent system. Rf-values, application basic principle of partition, paper, column, thin layer liquid-liquid partition and high performance. Liquid chromatography.

6 hrs.

Section-E

Solution and collective - properties

Ideal and Non-ideal solution. Methods of expressing concentrations of solution, activity and activity coefficient. Dilute solution. Colligative properties, Raoults law. Realotive lowering of vapour pressure. Molecular weight determination, osmotic law of osmotic pressure and its measurements. Determination of molecular weight by osmotic pressure method. Elevation of boiling point and depression in freezing point. Thermodynamic derivation of relation between molecular weight and elevation in boiling point and depression in freezing point. Experimental methods for determining various colligative properties. Abnormal molar mass. Degree of dissociation and association of solutes.

12 hrs.

Physical properties and Molecular structure

Optical activity, polarization, clausius- mossotti equation, orientation of dipoles in electric field. Dipole moment, induced dipole moment, measurement of dipole moment by temperature methods and refrectivity method. Dipole moment and chemical constitution, magnetic properties - paramagnetic, diamagnetic, ferrodynamic.

6 hrs.

B. Sc. III (Hons).

Paper- XVII (Theory) Organic Chemistry-I

Max. marks: 50 Time: 3 Hrs.

Note: Ten questions will be set, two questions from each section. The candidate will be required to attempt five questions in all; selecting one question from each section. As far as possible questions will be short answer type and not essay type.

Section-A

Spectroscopy

18 Hrs

Principle of nuclear magnetic resonance, the PMR spectrum, number of signals, peak areas, equivalent and nonequivalent protons, positions of signals and chemical shift, shielding and deshielding of protons, proton counting, splitting of signals and coupling constants, magnetic equivalence of protons. Discussion of PMR spectra of the molecules: ethyl bromide, n-propyl bromide, isopropyl bromide, 1,1-dibromoethane, 1,1,2-tribromoethane, ethanol, acetaldehyde, ethyl acetate, toluene, benzaldehyde, acetophenone, p-anisidine and p-nitrotoluene. Simple problems on PMR spectroscopy for structure determination of organic compounds.

Mass Spectroscopy: Introduction, instrumentation, mass spectrum, determination of molecular formula, parent peak and base peak, recognition of molecular ion peak, fragmentation pattern of alkanes, alkenes and benzene.

Section - B

Carbohydrates-

8 Hrs

Classification and nomenclature. Monosaccharides, mechanism of osazone formation, interconversion of glucose and fructose, chain lengthening and chain shortening of aldoses. Configuration of monosaccharides. Erythro and threo diastereomers. Conversion of glucose into mannose. Formation of glycosides, ethers and esters. Determination of ring size of glucose and fructose. Open chain and cyclic structure of D(+)-glucose & D(-) fructose. Mechanism of mutarotation.

Structures of ribose and deoxyribose.

An introduction to disaccharides (maltose, sucrose and lactose) and polysaccharides (starch and cellulose) without involving structure determination.

Organometallic Compounds

10 Hrs

Organomagnesium compounds: the Grignard reagentsformation, structure and chemical reactions.

Organozinc compounds: formation and chemical reactions.

Organolithium compounds: formation and chemical reactions.

Organo lead compounds: formation and chemical reactions.

Organo cadmium compounds: formation and chemical reactions.

Organo copper compounds: formation and chemical reactions.

Section - C

Organosulphur Compounds

4 Hrs

Nomenclature, structural features, Methods of formation and chemical reactions of thiols, thioethers, sulphonic acids, sulphonamides and sulphaguanidine. Synthetic detergents alkyl and aryl sulphonates.

Organo Phosphorus Compounds:

6 hrs.

Nomenclature, Trivalent phosphorus compounds - trialkyl and triaryl phosphine (method of formation and reactions), Pentavalent phosphorus compounds, organic phosphoranes, phosphorus ylides, wittig reaction. Biological role of phosphorus.

Heterocyclic Compounds

8 Hrs.

Introduction: Molecular orbital picture and aromatic characteristics of pyrrole, furan, thiophene and pyridine. Methods of synthesis and chemical reactions with particular emphasis on the mechanism of electrophilic substitution. Mechanism of nucleophilic substitution reactions in pyridine derivatives. Comparison of basicity of pyridine, piperidine and pyrrole.

Introduction to condensed five and six- membered heterocycles. Prepration and reactions of indole, quinoline and isoquinoline with special reference to Fisher indole synthesis, Skraup synthesis and Bischler-Napieralski synthesis. Mechanism of electrophilic substitution reactions of indole, quinoline and isoquinoline.

Section - D

Organic Synthesis via Enolates

6 Hrs.

Acidity of α -hydrogens, alkylation of diethyl malonate and ethyl acetoacetate. Synthesis of ethyl acetoacetate: the Claisen condensation. Keto-enol tautomerism of ethyl acetoacetate. Alkylation of 1,3-dithianes. Alkylation and acylation of enamines

Amino Acids, Peptides, Proteins and Nucleic Acids

12 Hrs

Classification, structure and stereochemistry of amino acids. Acid-base behavior, isoelectric point and electrophoresis. Preparation and reactions of α -amino acids.

Structure and nomenclature of peptides and proteins. Classification of proteins. Peptide structure determination, end group analysis, selective hydrolysis of peptides. Classical peptide synthesis, solid—phase peptide synthesis. Structures of peptides and proteins. Levels of protein structure. Protein denaturation/renaturation.

Purines and pyrimidines: Introduction to purines and pyrimidines, preparation and reactions of adenine, guanine, cytosine, uracil, thymine, tautomerism in purines and pyrimidines.

Nucleic acids: introduction. Constituents of nucleic acids. Ribonucleosides and ribonucleotides. The double helical structure of DNA.

Section - E

Synthetic Dyes

8 Hrs.

Colour and constitution (electronic concept). Classification of dyes. Chemistry and synthesis of Methyl orange, Congo red, Malachite green, Crystal violet, Phenolphthalein, Fluorescein, Alizarin and Indigo.

Polymers:

10 hrs.

Brief history of macromolecular Science,

- Natural polymers: Starch, cellulose silk resin.
- Classification, types of polymerisation: Addition, condensation and their mechanisms (free radical, ionic and coordination Ziegler Natta Catalyst), methods of polymerisation bulk suspension, emulsion and solution.

Detailed study of following polymers with respect to synthesis, properties and applications.

- (I) Phenol formaldehydes resins.
- (II) Urea formaldehydes resins.
- (III) Polyesters
- (IV) Polyamides.
- (V) Natural and synthetic rubbers.

B. Sc. (Hons).III Year Paper XVIII (Theory) Organic Chemistry-II

Max. marks: 50 Time: 3 Hrs.

Note: Ten questions will be set, two questions from each section. The candidate will be required to attempt five questions in all, selecting one question from each section.

Section - A

Fats, Oil and Detergents:

8 hrs.

Occurrence, chemical composition and importance, hydrogenated oils, Rancidity, acid value, sponification and iodine numbers, difference between toilet and washing soaps, comparison of soap and detergents, classification and principle of cleansing action of detergents.

Pesticides:

- 10 hrs.

-Classification, Natural pesticides: Nicotinides, Pyrethroids, Rotenoide, Sabodilia, Ryania, Synthetic pesticides: Nitrophenols, Halogens derivatives of aromatic hydrocarbons and alicyclic hydrocarbons, organo phosphorus pesticides. Preparation, reactions and uses of DDT, BHC, Malathion and Parathion.

Section -B

Vitamins

10 hrs.

Introduction, classification, pro vitamins, occurrence, structure

and deficiency diseases of vitamins A, B complex (B₁, B₂, B₆ and B₁₂), C, D, E, H and K

Harmones:

8 hrs.

Introduction, functions, difference between harmones and vitamins, classification and study of Thyroxine, Adrenalin, Insulin, Testosterone, Progesterone, Estrogens, Cortison (structure, secreting gland and functions).

Section - C

Topics in Biological Chemistry:

10 hrs.

Introduction to enzymes, nomenclature, characteristics, general picture of mechanism of enzymes action, co-enzymes: co-enzymes derived from niacin and thiamine, lipoic acid, co-enzyme-A, energy production in biological system, glycolysis, tricarboxylic acid cycle.

Fermentation

8 hrs.

Anaerobic and aerobic fermentation, production of alcohol, citric acid and lactic acid.

Section - D

Terpenoids:

8 hrs.

Introduction, essential oils, classification of terpenes, isolation, isoprene rule, isolation, structure elucidation and synthesis of citral and geraniol.

Alkaloids

10 hrs.

Introduction, classificatio, extraction, physiological action in alkaloids, general characteristics, general methods of determining structures, Hofmann's exhaustive methylation, isolation, structure elucidation and synthesis of nicotine, cocaine, conine and piprin.

Section - E

Drugs: 18 hrs.

Introduction, relation of chemical structure and physiological activity with suitable examples, mechanism of chemotherapeutic action. Nomenclature of organic chemical systems, stereochemical notations. General aspects, preparation and uses of the following drugs:

(i) Analgesics and antipyretics: paracetamol, Aspirin

(ii) Anti-inflammatory : Ibuprofen

(iii) Sulpha : Sulphacetamide

(iv) Local anaesthetics : Benzocaine

(v) Anti amoebic : Metronidazole

(vi) Antimalarials : Chloroquinine

(vii) Antihistamines : Chlorophenizamine

: Maleate

(viii) Antifungal : Undecylenic acid

(ix) Insect repellants : Dibutyl phthalate

(x) Antiseptics and disinfectants: Chloro cresol, povidone -

Iodine ___

(xi) Antibiotics : Chloroamphenicol

Paper - XIX Inorganic Chemistry Practical

Max. Marks: 50

Time: 6 Hrs.

Practicals = 30 marks Viva-Voce = 10 marks Lab. Records = 10 marks

Inorganic Synthesis:

- (a) Preparation of sodium trioxalate ferrate (III), $[Na_3[Fe(C_2O_4)_3]]$ and determination of its composition by permaganatometry.
- (b) Preparation of copper tetraammine complex [Cu(NH₃)₄] SO₄
- (c) Preparation of cis and trans- bisoxalato diaqua chromate (III) ion.
- (d) Mercuric tetrathiocyanato cobaltate (II), Hg [Co(SCN)₄]
- 2 (a) Colorimetry: To verify Beer-Lambert law for KMnO₄/ K₂Cr₂O₇ and determine the concentration of the given KMnO₄/ K₂Cr₂O₇ solution.
 - (b) Solvent extraction

Separation and estimation of Fe (II) (estimation by colorimetrically)

3. Analysis of insoluble:

Only one to be given (PbSO₄, AgCl, AgBr., AgI, BaSO₄, SrSO₄, CaSO₄, CaF₂, SiO₂, and Al₂O₃)

Paper - XX Physical Chemistry Practical

Max. Marks: 50 Time: 6 hrs.

Distribution Law

- i) To study the distribution of Iodine between H₂O and CCl₄
- ii) To study distribution of benzoic acid in benzene and water.

 To study the equilibrium constant of complex reach e.g. I

 + 1, 1,

Buffer Solution:

Preparation of buffer solution.

(NH₄Cl, NH₄OH) CH₃CooH and CH₃ COONa and determination of pH of buffer solution.

Phase equilibrium:

To study the effect of solute (NaCl, succinic Acid) on the critical solution temperature of two partially miscible liquid (e.g. water-phenol) and to determine the concentration of that solute in the given water-phenol system.

Conductometric Titration:

- (1) Determination of cell constant of the conductivity cell.
- (2) Determination of solubility and solubility product of the given sparingly soluble salt.
- (3) Determination of molar conductance of the salt by conductometric method.
- (4) Conductometric titrations of strong acid vs strong base.

Potentiometric Titration:

- (i) Potentiometric titration of strong/weak and against weak/ strong base.
- (ii) To titrate the given FeSO₄ NH₂(SO₄)₂ 6H₂O solution using KMnO₄/ K₂Cr₂O₇ as titrant and calculate redox potential of Fe²⁺/ Fe³⁺ system on the hydrogen scale.

Specific Rotation (Polarimetery)

To determine the specific rotation of the given optically active compound.

Colorimetry:

- (i) To verify the Lembert Beer's Law using KMnO₄/K₂Cr₂O₇ solution.
- (ii) Determination of concentration of unknown solution of substance.

B.Sc. (Hons.) IIIrd year (PAPER XXI)Organic Chemistry Practical

Max. marks: 50 Time: 6 hrs

1. Laboratory Techniques

(a) Steam distillation

Naphthalene from its suspension in water Separation of o-and p-nitrophenols

(b) Column chromatography

Separation of fluorescein and methylene blue Separation of leaf pigments from spinach leaves

2. Thin Layer Chromatography

Determination of R_f values and identification of organic compounds.

- (a) Separation of green leaf pigments (spinach leaves may be used)
- (b) Separation of a mixture of dyes using cyclohexane and ethyl acetate (8.5: 1.5)

3. Paper Chromatography

Determination of R_f values and identification of organic compounds

- (a) Separation of a mixture of phenylalanine and glycine. Alanine and aspartic acid. Leucine and glutamic acid. Spray reagent-ninhydrin.
- (b) Separation of mixture of D,L-alanine, glycine and L-leucine using n-butanol: acetic acid water (4:1:5). Spray reagent-ninhydrin.

4. Synthesis of the following organic compounds:

- (a) p-Nitroacetanilide from acetanilide and its hydrolysis to p-nitroaniline.
- (b) 1,3,5-Tribromobenzene from aniline.
- (c) Phthalimide from phthalic anhydride and its rearrangement to anthranilic acid.
- (d) Benzanilide from benzophenone.

5. Determination of:

- (a) Acid value: Resin, Plasticizers
- (b) Iodine number: Linseed oil, Castrol oil
- (c) Saponification value: coconut oil, polyester.
