## (Set-"X")

(DO NOT OPEN THIS QUESTION BOOKLET BEFORE TIME OR UNTLL YOU ARE ASKED TO DO SO) (M.Phil/Ph.D/URS-EE-2018)

## Code

 Subject : ELECTRICAL ENGG.sr. No. 100021

Time: $11 / 4$ Hours
Max. Marks : 100
Total Questions : 100
Roll No. $\qquad$ (in figure) $\qquad$ (in words) Name: $\qquad$
Mother's Name : Father's Name:

Date of Examination : $\qquad$
(Signature of the Invigilator)
(Signature of the candidate)
CANDIDATES MUST READ THE FOLLOWING INFORMATION/ INSTRUCTIONS BEFORE STARTING THE QUESTION PAPER.

1. All questions are compulsory.
2. The candidates must return the Question book-let as well as OMR answer-sheet to the Invigilator concerned before leaving the Examination Hall, failing which a case of use of unfair-means / mis-behaviour will be registered against him / her, in addition to lodging of an FIR with the police. Further the answer-sheet of such a candidate will not be evaluated.
3. Keeping in view the transparency of the examination system, carbonless OMR Sheet is provided to the candidate so that a copy of OMR Sheet may be kept by the candidate.
4. Question Booklet along with answer key of all the A, B, C, D code will be got uploaded on the University website after the conduct of Entrance Examination. In case there is any discrepancy in the Question Booklet / Answer Key, the same may be brought to the notice of the Controller of Examination in writing/ through E.Mail within 24 hours of uploading the same on the University Website. Thereafter, no complaint in any case, will be considered
5. The candidate MUST NOT do any rough work or writing in the OMR Answer-Sheet. Rough work, if any, may be done in the question book-let itself. Answers MUST NOT be ticked in the Question book-let.
6. There will be no Negative marking. Each correct answer will be awarded one full mark. Cutting, erasing, overwriting and more than one answer in OMR Answer-Sheet will be treated as incorrect answer.
7. Use only Black or Blue BALL POINT PEN of good quality in the OMR AnswerSheet.
8. BEFORE ANSWERING THE QUESTIONS, THE CANDIDATES SHOULD ENSURE THAT THEY HAVE BEEN SUPPLIED CORRECT AND COMPLETE BOOK-LET. COMPLAINTS, IF ANY, REGARDING MISPRINTING ETC. WILL NOT BE ENTERTAINED 30 MINUTES AFTER STARTING OF THE EXAMINATION.
uestion

## Questions

1. The system of linear equations
$(4 d-1) x+y+z=0$
$-y+z=0$
$(4 d-1) z=0$
has a non-trivial solution, if d equals
(1) $1 / 2$
(2) $1 / 4$
(3) $3 / 4$
(4) 1
2. Eigen vector(s) of the matrix
$\left[\begin{array}{lll}0 & 0 & \alpha \\ 0 & 0 & 0 \\ 0 & 0 & 0\end{array}\right]$
is (are)
(1) $(0,0, \alpha)$
(2) $(\alpha, 0,0)$
(3) $(0,0,1)$
(4) $(0, \alpha, 0)$
3. Consider the $z$-transform $X(z)=5 z^{2}+4 z^{-1}+3 ; 0<|z|<\infty$. The inverse z -transform $\mathrm{x}[\mathrm{n}]$ is
(1) $5 \delta[\mathrm{n}+2]+3 \delta[\mathrm{n}]+4 \delta[\mathrm{n}-1]$
(2) $5 \delta[\mathrm{n}-2]+3 \delta[\mathrm{n}]+4 \delta[\mathrm{n}+1]$
(3) $5 \mathrm{u}[\mathrm{n}+2]+3 \mathrm{u}[\mathrm{n}]+4 \mathrm{u}[\mathrm{n}-1]$
(4) $5 u[n-2]+3 u[n]+4 u[n+1]$

| Question No. | Questions |
| :---: | :---: |
| 4. | If $\delta(t)$ denotes a unit impulse then Laplace Transform of $\frac{d^{2} \delta(t)}{d t^{2}}$ will be <br> (1) $l$ <br> (2) $\mathrm{s}^{2}$ <br> (3) s <br> (4) $\mathrm{s}^{-2}$ |
| 5. | The state equation of LTI system is represented by $\dot{x}=\left[\begin{array}{rr} 0 & 0 \\ -2 & -1 \end{array}\right] x+\left[\begin{array}{ll} 0 & 1 \\ 1 & 0 \end{array}\right] u$ <br> The Eigen values are. <br> (1) $-1,+1$ <br> (2) $0.5 \pm \mathrm{j} 1.323$ <br> (3), $-1,-1$ <br> (4) None |
| 6. | Line integral can be transformed into a surface integral by using <br> (1) Divergence theorem <br> (2) Gauss theorem <br> (3) Stokes theorem <br> (4) None of these |
| 7. | Four fundamental equations of electromagnetics are known as <br> (1) Fleming's laws <br> (2) Faraday's laws <br> (3) Lorentz equations <br> (4) Maxwell's equations |
| 8. | For a linear electromagnetic circuit, which of the following statements is true? <br> (1) Field energy is equal to the co-energy <br> (2) Field energy is greater than the co-energy <br> (3) Field energy is lesser than the co-energy <br> (4) Co-energy is zero |

## Questions

9. Which of the following statements holds for the divergence of electric and magnetic flux
(1) Both are zero
(2) These are zero for static densities but non-zero for time varying densities.
(3) It is zero for the electric flux density
(4) It is zero for the magnetic flux density
10. A parallel plate capacitor has an electrode area of $100 \mathrm{~mm}^{2}$, with a spacing of 0.1 mm between the electrodes. The dielectric between the plates is air with a permittivity of $8.85 \times 10^{-12} \mathrm{~F} / \mathrm{m}$. The charge on the capacitor is 100 V . The Stored energy in the capacitor is :
(1) 8.85 pJ
(2) 440 pJ
(3) 22.1 nJ
(4) 44.3 nJ
11. Whenever the magnetic flux changes with respect to an electric conductor or a coil, an EMF is induced in the conductor is Faraday's
(1) First law
(2) Second law
(3) Third law
(4) Fourth law
12. Inside a hollow conducting sphere
(1) Electric field is zero.
(2) Electric field is a non-zero constant.
(3) Electric field changes with magnitude of the charge given to the conductor.
(4) Electric field changes with distance from the center of the sphere.

| $\begin{gathered} \text { Question } \\ \text { No. } \end{gathered}$ | Questions |
| :---: | :---: |
| 13. | A conductor of length $L$ has current I passing through it, when it is placed parallel to strong magnetic field. The force experienced by the conductor will be <br> (1) BIL <br> (2) $\mathrm{BIL}^{2}$ <br> (3) $\mathrm{BI}^{2} \mathrm{~L}$ <br> (4) Zero |
| 14. | Cork Screw rule is used to find <br> (1) Direction of magnetic field <br> (2) Direction of electric field <br> (3) Direction of current <br> (4) Direction of emf |
| 15. | A point pole has a strength of $4 \pi \times 10^{-4}$ weber. The force in Newtons on a point pole of $4 \pi \times 1.5 \times 10^{-4}$ weber placed at a distance of 10 cm from it will be <br> (1) 20 N <br> (2) 15 N <br> (3) 7.5 N <br> (4) 3.75 N |
| 16. | In a sample it is observed that a carrier takes $100 \mu$ s to over a distance of 10 cm . If the applied external field is $10^{4} \mathrm{~V} / \mathrm{cm}$; find the mobolity <br> (1) $10^{7} \mathrm{~cm}^{2} / \mathrm{Vs}$ <br> (2) $10^{-3} \mathrm{~cm}^{2} / \mathrm{Vs}$ <br> (3) $10 \mathrm{~cm}^{2} / \mathrm{Vs}$ <br> (4) $10^{7} \mathrm{~m}^{2} / \mathrm{Vs}$ |
| 17. | The current gain of a bipolar transistor drops at high frequency because of <br> (1) Transistor internal capacitances <br> (2) High current effects in the base <br> (3) Parasitic inductive elements <br> (4) The Early effect |

## Questions

No.
18. A transistor has $\alpha=0.98$, then determine $\beta$.
(1) 50
(2) 49
(3) 70
(4) None of the above
19. The value of emitter capacitor CE in a multistage amplifier is about
(1) $0.1 \mu \mathrm{~F}$
(2) 100 pF
(3) $0.01 \mu \mathrm{~F}$
(4) $50 \mu \mathrm{~F}$
20. The conduction loss versus device current characteristic of a power MOSFET is best
(1) A parabola
(2) A straight line
(3) A rectangular hyperbola
(4) An exponentially decaying function
21. The hexadecimal equivalent of the octal number 171.62 is
(1) 3C1.C0
(2) $79 . \mathrm{C} 8$
(3) $89 . \mathrm{C} 7$
(4) 97.8 C
22. Which of the following circuit can be used as parallel to series converter?
(1) Digital Counter
(2) Decoder
(3) De-multiplexer
(4) Multiplexer
23. How many fillip-flops are required to construct a decade counter?
(1) 10
(2) 3
(3) 4
(4) ${ }^{\prime} 2$

## PHD-EE-2018 (Electrical Engineering) Code-A

## Questions

24. Which is not a type of ROM?
(1) Mask ROM
(2) PROM
(3) EEPROM
(4) XROM
25. A stage in shift register consist of
(1) Latch
(2) Flip flop
(3) Byte of storage
(4) four bits of storage
26. The closed loop transfer function of a system is
$T(s)=\frac{(s+8)(s+6)}{s^{5}+s^{4}+4 s^{3}-4 s^{2}+3 s-2}$
The number of poles in RHP and LHP are
(1) 4,1
(2) 1,4
(3) 3,2
(4) 2,3
27. For a second order system settling time $T_{s}=7 \mathrm{sec}$ and peak time $T_{p}=3 \mathrm{sec}$. The location of poles are
(1) $-0.97 \pm \mathrm{j} 0.69$
(2) $-0.69 \pm \mathrm{j} 0.97$
(3) $-1.047 \pm \mathrm{j} 0.571$
(4) $-0.571 \pm \mathrm{j} 1.047$
28. The open loop transfer function of a unity feedback system is $\mathrm{G}(\mathrm{s})=\frac{50}{(1+0.1 \mathrm{~s})(1+2 \mathrm{~s})}$
The position, velocity and acceleration error constants are respectively
(1) $0,0,250$
(2) $50,0,0$
(3) $0,250, \infty$
(4) $\infty, 50,0$

## PHD-EE-2018 (Electrical Engineering) Code-A

## (6)

## Questions

29. A unity feedback system has a forward path transfer function is
$G(s)=\frac{10(1+4 s)}{s^{2}(1+s)}$
If the system is subjected to an input
$r(t)=1+t+\frac{t^{2}}{2}, t \succ 0$
the steady state error of the system will be
(1) 1
(2) 0.1
(3) 10
(4) $\infty$
30. For the Bode plot shown in figure, the transfer function is

(1) $\frac{100 \mathrm{~s}^{2}}{(1+0.1 \mathrm{~s})^{3}}$
(2) $\frac{1000 \mathrm{~s}^{2}}{(1+0.1 \mathrm{~s})^{6}}$
(3) $\frac{15.6 \mathrm{~s}^{2}}{(1+0.1 \mathrm{~s})^{6}}$
(4) None

PHD-EE-2018 (Electrical Engineering) Code-A (8)

Question No.

## Questions

35. The open loop transfer function of a feedback system is $G(s) H(s)=\frac{K(s+1)}{(1-s)}$.
The nyquist plot of this system is
(1)

(2)

(3)

(4)

36. The equation for 25 cycles electric current sine wave having rms value of 30 amps , will be
(1) $42.4 \sin 50 \pi t$
(2) $30 \sin 50 \pi t$
(3) $30 \sin 25 \pi t$
(4) $42.4 \sin 25 \pi t$
37. The equation of an emf is given by $e=I_{m}\left[\sqrt{ }\left(R^{2}+4 \omega^{2} L^{2}\right)\right] \sin 2 \omega t$. The amplitude of the wave will be
(1) $I_{m}\left[\left(R^{2}+4 \omega^{2} L^{2}\right)^{1 / 2}\right]$
(2) $\sqrt{ } 2 \mathrm{I}_{\mathrm{m}}\left[\left(\mathrm{R}^{2}+4 \omega^{2} \mathrm{~L}^{2}\right)^{1 / 2}\right]$
(3) $\left[I_{m}\left(R^{2}+4 \omega^{2} L^{2}\right)\right]^{1 / 2}$
(4) $2 I_{m}\left[\left(R^{2}+4 \omega^{2} L^{2}\right)^{1 / 2}\right]$

## Questions

No.
40. In the figure given, the value' of $R$ is

(1) $10 \Omega$
(2) $12 \Omega$
(3) $18 \Omega$
(4) $24 \Omega$
41. In the given figure, the Thevenin equivalent voltage and impedance as seen from the terminals $P-Q$ is given by

(1) 4 V and $7.5 \Omega$
(2) 2 V and $7.5 \Omega$
(3) $4 V$ and $5 \Omega$
(4) 2 V and $5 \Omega$
42. A coil having a resistance of $5 \Omega$ and inductance of 0.1 H is connected in series with a condenser of capacitance $50 \mu \mathrm{~F}$. A constant alternating voltage of 200 V is applied to the circuit. The voltage across coil at resonance is
(1) 200 V
(2) 1788 V
(3). 1800 V
(4) 2000 V

## Questions

43. An RLC series circuit resonates at a frequency $w_{r}$ the ratio of $w_{r} L / R=10$ the variable frequency voltage applied to the circuit is $20 \sin (\omega t+\pi / 3)$ the voltage measured across the capacitance
(1) $200 / \sqrt{ } 2$
(2) $220 / \sqrt{ } 2$
(3) $20 / \sqrt{ } 2$
(4) $1 / 2$
44. What is the relation between line voltage and phase voltage in case of delta connection?
(1) $V_{L}=V_{p}$.
(2) $\mathrm{V}_{\mathrm{t}}=1 / \sqrt{ } 3 \mathrm{~V}_{\mathrm{p}}$.
(3) $V_{L}=\sqrt{ } 3 V_{p}$.
(4) None of these
45. The rms value of the current is a wire which carries a dc current of 10 A and a sinusoidal alternating current of peak value 20 A is
(1) 10 A
(2) 14.14 A
(3) 15 A
(4) 17.32 A
46. The purpose of compensation for a thermocouple is
(1) To decrease temperature sensitivity
(2) To increase volatge output
(3) To cancel unwanted voltage output of a thermocouple
(4) Used for high-temperature circuits
47. Semiconductor strain gages typical have much higher gage factors than those of metallic strain gages primarily due to
(1) Higher temperature sensitivity
(2) Higher Poisson's ratio
(3) Higher piezoresistive coefficient
(4) Higher magnetostrictive coefficient

## Questions

48. For the op-amp shown in the figure, the bias currents are $I_{b 1}=450 \mathrm{nA}$ and $I_{b 2}=350 \mathrm{nA}$. The values of the input bias current $\left(I_{b}\right)$ and the input offset current ( $I_{f}$ ) are

(1) $I_{b}=800 \mathrm{nA}, I_{f}=50 \mathrm{nA}$
(2) $I_{b}=800 \mathrm{nA}, I_{f}=100 \mathrm{nA}$
(3) $\mathrm{I}_{\mathrm{b}}=400 \mathrm{nA}, \mathrm{I}_{\mathrm{f}}=50 \mathrm{nA}$
(4) $I_{b}=400 \mathrm{nA}, I_{f}=100 \mathrm{nA}$
49. A Hall Effect sensor
(1) exists only in theory
(2) is a non-contacting magnetic sensor
(3) can operate only a few times before failure
(4) produces very large voltages
50. For turbulent flow, the velocity at the center is $\qquad$ times the mean velocity.
(1) 1.2
(2) 2.2
(3) 2
(4) 3.333
51. A psychrometric chart is used to determine
(1) pH
(2). Sound velocity in glasses
(3) $\mathrm{CO}_{2}$ concentration
(4) Relative humidity

## PHD-EE-2018 (Electrical Engineering) Code-A

| Questio No. | Questions |
| :---: | :---: |
| 56. | A 500 kVA , three phase transformer has iron losses of 300 W and full load copper losses of 600 W . The percentage load at which the transformer is expected to have maximum efficiency is <br> (1). $50.0 \%$ <br> (2) $70.7 \%$ <br> (3) $141.4 \%$ <br> (4) $200.0 \%$ |
| 57. | A single phase transformer has a maximum efficiency of $90 \%$ at full load and unity power factor. Efficiency at half load at the same power factor is <br> (1) $86.7 \%$ <br> (2) $88.26 \%$ <br> (3) $88.9 \%$ <br> (4) $87.8 \%$ |
|  | Which of the following motor definitely has a permanent magnet rotor <br> (1) DC commutator motor <br> (2) Brushless DC motor <br> (3) Stepper motor <br> (4) Reluctance motor |
| 59. | The type of single phase induction motor having the highest power factor at full load is <br> (1) Shaded pole type <br> (2) Split phase type <br> (3) Capacitor start type <br> (4) Capacitor run type |
| 60. | The direction of rotation of a three phase induction motor is clockwise when it is supplied with three phase sinusoidal voltage having phase sequence A-B-C, for counter clockwise rotation of the motor, the phase sequence of the power supply should be <br> (1) B-C-A <br> (2) C-A-B <br> (3) A.C-B <br> (4) None of above |

61. A rotating electrical machine having its self-inductance's of both the stator and the rotor windings independent of the rotor position will definitely not develop

## Questions

(1) Starting Torque
(2) Synchronizing torque
(3) Hysteresis Torque
(4) Reluctance torque
62. If peak value of phase $m m f$ is $\mathrm{F}_{\text {max }}$, then peak value of the rotating field caused by three phase is
(1) $(3 / 2) F_{\text {max }}$
(2) $\mathrm{F}_{\text {max }}$
(3) $3 \mathrm{~F}_{\text {max }}$
(4) $(1 / 2) \mathrm{F}_{\max }$
63. A $50 \mathrm{~Hz}, 4$ pole turbo generator rated at $20 \mathrm{MVA}, 13.2 \mathrm{KV}$ has inertia constant $\mathrm{H}=3 \mathrm{~kW} \sec / \mathrm{KVA}$. The kinetic energy stored in the rotor is
(1) 80 MJ
(2) 60 MJ
(3) 20 MJ
(4) 10 MJ
64. An alternator is supplying a load of 300 kW of a p.f. of 0.6 lagging. If the power factor is raised to unity. How many more kilowatts can alternator supply for the same KVA loading
(1) 100 kW
(2) 200 kW
(3) 300 kW
(4) 500 kW
65. A 300 kVA , single phase transformer is designed to have resistance of $1.5 \%$ and max. efficiency occurs at load of 173.2 kVA . When supplying the full load at 0.8 p.f. lagging at normal voltage, the efficiency will be
(1) $12.6 \%$
(2) $97.6 \%$
(3) $35.5 \%$
(4) $29.6 \%$

Question

## Questions

66. For constant load current at which power factor the efficiency of a transformer will be maximum?
(1) Zero power factor
(2) Unity power factor
(3) Leading power factor
(4) Lagging power factor
67. The all-day efficiency is the term related to
(1) Power transformer
(2) Distribution transformer
(3) Current transformer
(4) Voltage transformer
68. Satisfactory commutation of $D C$ machine requires
(1) Smooth, concentric commutator properly undercut
(2) Brushes should smoothly run in the holders
(3) Brushes should be of proper grade and size
(4) All of the above
69. In a 3-Ф induction motor running at full load which of these parameters is stationary with respect to the stator mmf wave?
(1) Stator winding
(2) Rotor winding
(3) Both rotor and stator winding
(4) Rotor mmf wave

| Question | Questions |
| :---: | :---: |
| 70 | The damper windings also called the squirrel cage winging's damper grids <br> (1) consists of short-circuited copper bars embedded in the field pole faces <br> (2) are provided in a synchronous motor to make itself starting <br> (3) are provided on the stator for improving power factor <br> (4) both (1) and (2) |
| 71. | EHV transmission has which of the following advantages? <br> (1) Reduction in noise <br> (2) Increase in transmission efficiency <br> (3) Improves voltage regulation <br> (4) All of these |
| $\begin{array}{r}72 \\ \hline\end{array}$ | Absence of skin effect lower line cost, less corona effect are the features of which of the transmission system? <br> (1) EHV - AC system <br> (2) HVDC system <br> (3) Both (1) and (2) <br> (4) UHV - AC system |
| 73. | Inside the station of the broad gauge line what is the clearance between track and lowest conductor for operating voltages from $650 \mathrm{~V}-3 \mathrm{kV}$ ? <br> (1) 10 m <br> (2) 7.2 m <br> (3) 8.6 m <br> (4) 7.6 m |

| :---: | :---: |
| 79. | A 3 core cable gives on test a capacitance of 3.7 microfarad between two cores. Find the line charging current of the cable when it is connected to $11 \mathrm{kV}, 50 \mathrm{~Hz}$ system? <br> (1) 14.76 A <br> (2) 1.476 A <br> (3) 14.7 mA <br> (4) 1 A |
| 80. | The most suitable circuit breaker for short line fault without switching resistor is <br> (1) Oil circuit breaker <br> (2) Air blast circuit breaker <br> (3) $\mathrm{SF}_{6}$ breaker <br> (4) None of these |
| 81. | Mho relay is used for the protection of <br> (1) medium length lines <br> (2) long transmission lines <br> (3) short length lines <br> (4) no length criterion |
| 82. | An overhead line conductor has an inductance per unit length of $L$ henry. If the entire medium around the conductor is filled with a dielectric material of permittivity $\varepsilon$, then the inductance will <br> (1) $L / \varepsilon$ <br> (2) $\mathrm{L} / 0.5 \varepsilon$ <br> (3) L <br> (4) unchanged |
| 83. | When a line-to-ground fault occurs, the current in the phase is 100 A . The zero sequence current in the case will be <br> (1) 33.3 A <br> (2) 0 A <br> (3) 66.6 A <br> (4) 99.9 A |
| PHD | E-2018 (Electrical Engineering) Code-A <br> (20) |

Question

## Questions

84. Air blast circuit breaker is most suitably used in
(1) Up to 132 KV line
(2) Up to 260 KV line
(3) Up to 400 KV line
(4) any voltage
85. To reduce the adverse effect of corona discharge which conductor is specially used?
(1) ACSR
(2) Bundle conductor
(3) Aluminium conductor
(4) Copper conductor
86. A single phase one pulse controlled circuit has a resistance $R$ and counter emf $E$ load $400 \sin (314 t)$ as the source voltage. For a load counter emf of 200 V , the range of firing angle control is
(1). $30^{\circ}$ to $150^{\circ}$
(2) $30^{\circ}$ to $180^{\circ}$
(3) $60^{\circ}$ to $120^{\circ}$
(4) $60^{\circ}$ to $180^{\circ}$
87. Let of a thyristor $\mathrm{V}_{\mathrm{c} 1}, \mathrm{~V}_{\mathrm{c} 2}, \mathrm{~V}_{\mathrm{c} 3}$ are forward break over voltage for gate current $\mathrm{I}_{\mathrm{g} 1}, \mathrm{I}_{\mathrm{k} 2}, \mathrm{I}_{\mathrm{g} 3}$ respectively. Then
(1) $\mathrm{V}_{\mathrm{cl}}>\mathrm{V}_{\mathrm{c} 2}>\mathrm{V}_{\mathrm{c} 3}$ when $\mathrm{I}_{\mathrm{g} 1}>\mathrm{I}_{\mathrm{g} 2}>\mathrm{I}_{\mathrm{g} 3}$
(2) $\mathrm{V}_{\mathrm{cl}}>\mathrm{V}_{\mathrm{c} 2}>\mathrm{V}_{\mathrm{c} 3}$ when $\mathrm{I}_{\mathrm{g} 1}<\mathrm{I}_{\mathrm{g} 2}<\mathrm{I}_{\mathrm{g} 3}$
(3) $\mathrm{V}_{\mathrm{c} 1}=\mathrm{V}_{\mathrm{c} 2}=\mathrm{V}_{\mathrm{c} 3}$ any value of $\mathrm{I}_{\mathrm{g}}$
(4) $\mathrm{V}_{\mathrm{c} 1}>\mathrm{V}_{\mathrm{c} 2}>\mathrm{V}_{\mathrm{c} 3}$ when $\mathrm{I}_{\mathrm{g} 1} \geq \mathrm{I}_{\mathrm{g} 2} \geq \mathrm{I}_{\mathrm{g} 3}$
88. Triace cannot be used in AC voltage regulator for a
(1) Resistive load
(2) Inductive load
(3) Back emf load
(4) Resistive Inductive
89. Latching current for an SCR inserted between a dc voltage source of 200 V and load is 100 mA . Compute the minimum rate of width pulse required to turn ON the SCR in case load consists of $R=20 \Omega$ in series with $\mathrm{L}=0.2 \mathrm{H}$
(1) $200 \mu \mathrm{~s}$
(2) $300 \mu \mathrm{~s}$
(3) $150 \mu \mathrm{~s}$
(4) $100 \mu \mathrm{~s}$
90. Delay time is defined by the interval when
(1) gate current increases from $90 \%$ to $100 \%$ of its final value
(2) anode current reaches $10 \%$ from forward leakage current
(3) anode voltage drops from $100 \%$ to $90 \%$ of its actual value
(4) all of these
91. Typical range of thyristor turn OFF time is
(1) $3-10 \mu \mathrm{~s}$
(2) $3-50 \mu \mathrm{~s}$
(3) $3-100 \mu \mathrm{~s}$
(4) $3-500 \mu \mathrm{~s}$

## Code-A

92. String efficiency depends upon
(1) voltage rating of whole string
(2) no. of SCR in the string
(3) voltage rating of one SCR
(4) all of these
93. A thyristor string is made of a no. of SCR connected in series and parallel. The string have volume and current of 11 KV and 4 KA . The voltage and current rating of available SCRs are 1800 V and 1000 A . For a string efficiency of $90 \%$ let the number of SCRs in series and parallel are $a$ and $b$ respectively. Then the value of $a$ and $b$ will be
(1) 5,7
(2) 4,6
(3) 7,5
(4) 6,4
94. A 200 A thyristor is to be operated in parallel with a 300 A thyristor. The ON state voltage drops are 1.5 V and 1.2 Volts. What is the value of resistance $R$ to be connected in series with each thyristor, so that current through the combination is 500 A and each of them is fully loaded?
(1) $0.03 \times 10^{-2} \Omega$
(2) $0.3 \times 10^{-3} \Omega$
(3) $3.0 \times 10^{-3} \Omega$
(4) $0.3 \times 10^{-2} \Omega$

## PHD-EE-2018 (Electrical Engineering) Code-A

(23) value of minimum width of the property turn ON the SCR?

(1) $3 \mu \mathrm{~s}$
(2) $3.1 \mu \mathrm{~s}$
(3) $3.2 \mu \mathrm{~s}$
(4) $3.3 \mu \mathrm{~s}$
96. A thyristor will be triggered when $\mathrm{V}_{\mathrm{g}}=1.5$ volt and $\mathrm{I}_{\mathrm{g}}=100 \mathrm{~mA}$ in the given figure. Calculate the value of $R$ in ohm is

(1) 65
(2) 3.714
(3) 37.14
(4) 60
97. The peak to peak source current ripple in amperes is
(1) 0.96
(2) 0.144
(3) 0.192
(4) 0.288
Question
No.

## Questions

98. The average source current in amperes in steady state is
(1) $3 / 2$
(2) $5 / 3$
(3) $5 / 2$
(4) $15 / 4$
99. The rms value of load phase voltage is
(1) 105.1 V
(2) 141.4 V
(3) 212.2 V
(4) 282.8 V
100. In the DC bus voltage $\mathrm{V}_{\mathrm{d}}=300 \mathrm{~V}$, the power consumed by three phase load is
(1) 1.5 kW
(2) 2.0 kW
(3) 2.5 kW
(4) 3.0 kW
(DO NOT OPEN THIS QUESTION BOOKLET BEFORE TIME OR UNTIL YOU ARE ASKED TO DO SO)

## Code

 (M.Phil/Ph.D/URS-EE-2018) Subject : ELECTRICAL ENGG.Sr. No. 100018

Time : 1 $1 /$ Hours
Roll No. $\qquad$ (in figure)
Max. Marks : 100
$\qquad$ (in words)

Name: $\qquad$
Mother's Name : $\qquad$ Date of Examination:

Total Questions: 100

Father's Name: $\qquad$
$\qquad$
(Signature of the candidate)
(Signature of the Invigilator)
CANDIDATES MUST READ THE FOLLOWING INFORMATION/ INSTRUCTIONS BEFORE STARTING THE QUESTION PAPER.

1. All questions are compulsory.
2. The candidates must return the Question book-let as well as OMR answer-sheet to the Invigilator concerned before leaving the Examination Hall, failing which a case of use of unfair-means / mis-behaviour will be registered against him / her, in addition to lodging of an FIR with the police. Further the answer-sheet of such a candidate will not be evaluated.
3. Keeping in view the transparency of the examination system, carbonless OMR Sheet is provided to the candidate so that a copy of OMR Sheet may be kept by the candidate.
4. Question Booklet along with answer key of all the A, B, C, D code will be got uploaded on the University website after the conduct of Entrance Examination. In case there is any discrepancy in the Question Booklet / Answer Key, the same may be brought to the notice of the Controller of Examination in writing / through E.Mail within 24 hours of uploading the same on the University Website. Thereafter, no complaint in any case, will be considered
5. The candidate MUST NOT do any rough work or writing in the OMR Answer-Sheet. Rough work, if any, may be done in the question book-let itself. Answers MUST NOT be ticked in the Question book-let.
6. There will be no Negative marking. Each correct answer will be awarded one full mark. Cutting, erasing, overwriting and more than one answer in OMR Answer-Sheet will be treated as incorrect answer.
7. Use only Black or Blue BALL POINT PEN of good quality in the OMR AnswerSheet.
8. BEFORE ANSWERING THE QUESTIONS, THE CANDIDATES SHOULD ENSURE THAT THEY HAVE BEEN SUPPLIED CORRECT AND COMPLETE BOOK-LET. COMPLAINTS, IF ANY, REGARDING MISPRINTING ETC. WILL NOT BE ENTERTAINED 30 MINUTES AFTER STARTING OF THE EXAMINATION.

Question
No.

## Questions

1. In the given figure, the Thevenin equivalent voltage and impedance as seen from the terminals P-Q is given by

(1) 4 V and $7.5 \Omega$
(2) 2 V and $7.5 \Omega$
(3) 4 V and $5 \Omega$
(4) 2 V and $5 \Omega$
2. A coil having a resistance of $5 \Omega$ and inductance of 0.1 H is connected in series with a condenser of capacitance $50 \mu \mathrm{~F}$. A constant alternating voltage of 200 V is applied to the circuit. The voltage across coil at resonance is
(1) 200 V
(2) 1788 V
(3) 1800 V
(4) 2000 V
3. An RLC series circuit resonates at a frequency $w_{r}$ the ratio of $w_{r} L / R=10$ the variable frequency voltage applied to the circuit is $20 \sin (\omega t+\pi / 3)$ the voltage measured across the capacitance
(1) $200 / \sqrt{ } 2$
(2) $220 / \sqrt{ } 2$
(3) $20 / \sqrt{2}$
(4) $1 / 2$
4. What is the relation between line voltage and phase voltage in case of delta connection?
(1) $V_{L}=V_{p}$.
(2) $\mathrm{V}_{\mathrm{t}}=1 / \sqrt{ } 3 \mathrm{~V}_{\mathrm{p}}$.
(3) $V_{L}=\sqrt{3} V_{p}$
(4) None of these

## Questions

76. In a sample it is observed that a carrier takes $100 \mu \mathrm{~s}$ to over a distance of 10 cm . If the applied external field is $10^{4} \mathrm{~V} / \mathrm{cm}$; find the mobolity
(1) $10^{7} \mathrm{~cm}^{2} / \mathrm{Vs}$
(2) $10^{-3} \mathrm{~cm}^{2} / \mathrm{Vs}$
(3) $10 \mathrm{~cm}^{2} / \mathrm{Vs}$
(4) $10^{7} \mathrm{~m}^{2} / \mathrm{Vs}$
77. The current gain of a bipolar transistor drops at high frequency because of
(1) Transistor internal capacitances
(2) High current effects in the base
(3) Parasitic inductive elements
(4) The Early effect
78. A transistor has $\alpha=0.98$, then determine $\beta$.
(1) 50
(2) 49
(3) 70
(4) None of the above
79. The value of emitter capacitor CE in a multistage amplifier is about
(1) $0.1 \mu \mathrm{~F}$
(2) 100 pF
(3) $0.01 \mu \mathrm{~F}$
(4) $50 \mu \mathrm{~F}$
80. The conduction loss versus device current characteristic of a power MOSFET is best
(1) A parabola
(2) A straight line
(3) A rectangular hyperbola
(4) An exponentially decaying function

(DO NOT OPEN THIS QUESTION BOOKLET BEFORE TIME OR UNTIL YOU ARE ABKED TO DO BO) (M.Phil/Ph.D/URS-EE-2018)

## Code <br> 

Time: 11/4 Hours
Roll No. $\qquad$ (in figure) $\qquad$ (in words)

Name: $\qquad$ Father's Name : $\qquad$
Mother's Name : $\qquad$ Date of Examination : $\qquad$

## (Signature of the candidate) <br> (Signature of the Invigilator)

CANDIDATES MUST READ THE FOLLOWING INFORMATION/ INSTRUCTIONS BEFORE STARTING THE QUESTION PAPER.

1. All questions are compulsory.
2. The candidates must return the Question book-let as well as OMR answer-sheet to the Invigilator concerned before leaving the Examination Hall, failing which a case of use of unfair-means / mis-behaviour will be registered against him / her, in addition to lodging of an FIR with the police. Further the answer-sheet of such a candidate will not be evaluated.
3. Keeping in view the transparency of the examination system, carbonless OMR Sheet is provided to the candidate so that a copy of OMR Sheet may be kept by the candidate.
4. Question Booklet along with answer key of all the A, B, C, D code will be got uploaded on the University website after the conduct of Entrance Examination. In case there is any discrepancy in the Question Booklet / Answer Key, the same may be brought to the notice of the Controller of Examination in writing/ through E.Mail within 24 hours of uploading the same on the University Website. Thereafter, no complaint in any case, will be considered
5. The candidate MUST NOT do any rough work or writing in the OMR Answer-Sheet. Rough work, if any, may be done in the question book-let itself. Answers MUST NOT be ticked in the Question book-let.
6. There will be no Negative marking. Each correct answer will be awarded one full mark. Cutting, erasing, overwriting and more than one answer in OMR Answer-Sheet will be treated as incorrect answer.
7. Use only Black or Blue BALL POINT PEN of good quality in the OMR AnswerSheet.
8. BEFORE ANSWERING THE QUESTIONS, THE CANDIDATES SHOULD ENSURE THAT THEY HAVE BEEN SUPPLIED CORRECT AND COMPLETE BOOK-LET. COMPLAINTS, IF ANY, REGARDING MISPRINTING:ETC. WILL NOT BE ENTERTAINED 30 MINUTES AFTER STARTING OF THE EXAMINATION.

## Questions

1. The hexadecimal equivalent of the octal number 171.62 is
(1) $3 \mathrm{C} 1 . \mathrm{C} 0$
(2) $79 . \mathrm{C} 8$
(3) $89 . C 7$
(4) 97.8 C
2. Which of the following circuit can be used as parallel to series converter?
(1) Digital Counter
(2) Decoder
(3) De-multiplexer
(4) Multiplexer
3. How many fillip-flops are required to construct a decade counter?
(1) 10
(2) 3
(3). 4
(4) 2
4. Which is not a type of ROM ?
(1) Mask ROM
(2) PROM
(3) EEPROM
(4) XROM
5. A stage in shift register consist of
(1) Latch
(2) Flip flop
(3) Byte of storage
(4) four bits of storage
6. The closed loop transfer function of a system is
$T(s)=\frac{(s+8)(s+6)}{s^{5}+s^{4}+4 s^{3}-4 s^{2}+3 s-2}$
The number of poles in RHP and LHP are
(1) 4,1
(2) 1,4
(3) 3,2
(4) 2,3

## Question

 No.46. Line integral can be transformed into a surface integral by using
(1) Divergence theorem
(2) Gauss theorem
(3) Stokes theorem
(4) None of these
47. 

Four fundamental equations of electromagnetics are known as
(1) Fleming's laws
(2). Faraday's laws
(3) Lorentz equations
(4) Maxwell's equations
48. For a linear electromagnetic circuit, which of the following statements is true?
(1) Field energy is equal to the co-energy
(2) Field energy is greater than the co-energy
(3) Field energy is lesser than the co-energy
(4) Co-energy is zero
49. Which of the following statements holds for the divergence of electric and magnetic flux
(1) Both are zero
(2) These are zero for static densities but non-zero for time varying densities.
(3) It is zero for the electric flux density
(4) It is zero for the magnetic flux density

Question

No.
50. A parallel plate capacitor has an electrode area of $100 \mathrm{~mm}^{2}$, with a spacing of 0.1 mm between the electrodes. The dielectric between the plates is air with a permittivity of $8.85 \times 10^{-12} \mathrm{~F} / \mathrm{m}$. The charge on the capacitor is 100 V . The Stored energy in the capacitor is:
(1) 8.85 pJ
(2) 440 pJ
(3) 22.1 nJ
(4) : 44.3 nJ
51. Consider the gain-phase plot shown in fig. The gain margin and phase margin are

Fig
(1) $-2 \mathrm{~dB}, 40^{\circ}$
(2) $2 \mathrm{~dB}, 40^{\circ}$
(3) $2 \mathrm{~dB}, 140^{\circ}$
(4) $-2 \mathrm{~dB}, 140^{\circ}$
52. The root locus of a unity feed function is given by
(1) $\mathrm{k} / \mathrm{s}(\mathrm{s}+1)(\mathrm{s}+2)$
(2) $\mathrm{k}(\mathrm{s}+1) / \mathrm{s}(\mathrm{s}+2)$
(3) $k(s+2) / s(s+1)$
(4) $\mathrm{ks} /(\mathrm{s}+1)(\mathrm{s}+2)$

## Questions

(1) $0.1 \mu \mathrm{~F}$
(2) 100 pF
(3) $0.01 \mu \mathrm{~F}$
(4) $50 \mu \mathrm{~F}$
70. The conduction loss versus device current characteristic of a power MOSFET is best
(1) A parabola
(2) A straight line
(3) À rectangular hyperbola
(4) An exponentially decaying function
71. In the given figure, the Thevenin equivalent voltage and impedance as seen from the terminals $\mathrm{P}-\mathrm{Q}$ is given by

(1) 4 V and $7.5 \Omega$
(2) 2 V and $7.5 \Omega$
(3) 4 V and $5 \Omega$
(4) 2 V and $5 \Omega$
72. A coil having a resistance of $5 \Omega$ and inductance of 0.1 H is connected in series with a condenser of capacitance $50 \mu \mathrm{~F}$. A constant alternating voltage of 200 V is applied to the circuit. The voltage across coil at resonance is
(1) 200 V
(2) 1788 V
(3) 1800 V
(4) 2000 V

## Questions

73. An RLC series circuit resonates at a frequency $w_{r}$ the ratio of $w_{r} L / R=10$ the variable frequency voltage applied to the circuit is $20 \sin (\omega t+\pi / 3)$ the voltage measured across the capacitance
(1) $200 / \sqrt{ } 2$
(2) $220 / \sqrt{ } 2$
(3) $20 / \sqrt{ } 2$
(4) $1 / 2$
74. What is the relation between line voltage and phase voltage in case of delta connection?
(1) $V_{L}=V_{p}$.
(2) $\mathrm{V}_{\mathrm{t}}=1 / \sqrt{ } 3 \mathrm{~V}_{\mathrm{p}}$.
(3) $\mathrm{V}_{\mathrm{L}}=\sqrt{ } 3 \mathrm{~V}_{\mathrm{p}}$.
(4) None of these
75. The rms value of the current is a wire which carries a dc current of 10 A and a sinusoidal alternating current of peak value 20 A is
(1) 10 A
(2) 14.14 A
(3) 15 A
(4) 17.32 A
76. The purpose of compensation for a thermocouple is
(1) To decrease temperature sensitivity
(2) To increase volatge output
(3) To cancel unwanted voltage output of a thermocouple
(4) Used for high-temperature circuits
77. Semiconductor strain gages typical have much higher gage factors than those of metallic strain gages primarily due to
(1) Higher temperature sensitivity
(2) Higher Poisson's ratio
(3) Higher piezoresistive coefficient
(4) Higher magnetostrictive coefficient

No.
16. The equation for 25 cycles electric current sine wave having rms value of 30 amps , will be
(1) $42.4 \sin 50 \pi t$
(2). $30 \sin 50 \pi t$
(3) $30 \sin 25 \pi t$
(4) $42.4 \sin 25 \pi t$
17. The equation of $a n f$ is given by $e=I_{m}\left[\sqrt{ }\left(R^{2}+4 \omega^{2} L^{2}\right)\right] \sin 2 \omega t$. The amplitude of the wave will be
(1) $I_{m}\left[\left(R^{2}+4 \omega^{2} L^{2}\right)^{1 / 2}\right]$
(2) $\sqrt{ } 2 \mathrm{I}_{\mathrm{m}}\left[\left(\mathrm{R}^{2}+4 \omega^{2} \mathrm{~L}^{2}\right)^{1 / 2}\right]$
(3) $\left[I_{m}\left(R^{2}+4 \omega^{2} L^{2}\right)\right]^{1 / 2}$
(4) $2 \mathrm{I}_{\mathrm{m}}\left[\left(\mathrm{R}^{2}+4 \omega^{2} \mathrm{~L}^{2}\right)^{1 / 2}\right]$
18. In the figure, the potential difference between points $P$ and $Q$ is

(1) 6
(2). -6
(3) 10
(4) 12

## Questions

No.
19. In the network shown, what is the electric current $I$ is the direction shown

(1) 0 A .
(2) $1 / 3 \mathrm{~A}$.
(3) $5 / 6 \mathrm{~A}$.
(4) 4 A .
20. In the figure given, the value' of $R$ is

(1) $10 \Omega$
(2) $12 \Omega$
(3) $18 \Omega$
(4) $24 \Omega$

PHD-EE-2018 (Electrical Engineering) Code-D

## Code-D

25. A power station supplies the peak load of $50 \mathrm{MW}, 40 \mathrm{MW}$ and 70 MW to three localities. The annual load factor is 0.50 p.u. and the diversity factor of the load at the station is 1.55 the maximum demand on the station and average load respectively will be
(1) 51.61 MW
(2) 57.5 MW
(3) 53 MW
(4) 52 MW
26. Which of the followng circuit breakers produce least arc energy ?
(1) Air blast
(2) Air break
(3) Minimum oil
(4) Plain oil
27. A 100 Km long transmission line is loaded at 110 kV . If the loss of line is 5 MW and the load is 150 VA the resistance of the line is
(1) $4.65 \mathrm{ohms} /$ phase
(2) $2.26 \mathrm{ohms} /$ phase
(3) $8.06 \mathrm{ohms} /$ phase
(4) $6: 06 \mathrm{ohms} / \mathrm{phase}$
28. A three phase, 33 kV oil circuit breaker is rated $1200 \mathrm{~A}, 2000 \mathrm{MVA}, 3 \mathrm{~s}$. The symmetrical breaking current is
(1) 1200 A
(2) 3600 A
(3) 35 kA
(4) 104.8 kA
29. A 3 core cable gives on test a capacitance of 3.7 microfarad between two cores. Find the line charging current of the cable when it is connected to $11 \mathrm{kV}, 50 \mathrm{~Hz}$ system?
(1) 14.76 A
(2) 1.476 A
(3) 14.7 mA
(4) 1 A

## Questions

No.
36. The closed loop transfer function of a system is

$$
T(s)=\frac{(s+8)(s+6)}{s^{5}+s^{4}+4 s^{3}-4 s^{2}+3 s-2}
$$

The number of poles in RHP and LHP are
(1) 4,1
(2) 1,4
(3) 3,2
(4) 2,3
37. For a second order system settling time $T_{s}=7 \mathrm{sec}$ and peak time $T_{p}=3$ sec . The location of poles are
(1) $-0.97 \pm \mathrm{j} 0.69$
(2) $-0.69 \pm \mathrm{j} 0.97$
(3) $-1.047 \pm \mathrm{j} 0.571$
(4) $-0.571 \pm \mathrm{j} 1.047$
38. The open loop transfer function of a unity feedback system is $G(s)=\frac{50}{(1+0.1 s)(1+2 \mathrm{~s})}$
The position, velocity and acceleration error constants are respectively
(1) $0,0,250$
(2) $50,0,0$
(3) $0,250, \infty$
(4) $\infty, 50,0$

39. A unity feedback system has a forward path transfer function is

$$
G(s)=\frac{10(1+4 s)}{s^{2}(1+s)}
$$

If the system is subjected to an input
$r(t)=1+t+\frac{t^{2}}{2}, t \succ 0$
the steady state error of the system will be
(1) 1
(2) 0.1
(3) 10
(4) $\infty$

## Code-D

## Questions

40. For the Bode plot shown in figure, the transfer function is

(1) $\frac{100 \mathrm{~s}^{2}}{(1+0.1 \mathrm{~s})^{3}}$
(2) $\frac{1000 \mathrm{~s}^{2}}{(1+0.1 \mathrm{~s})^{6}}$
(3) $\frac{15.6 \mathrm{~s}^{2}}{(1+0.1 \mathrm{~s})^{6}}$
(4) None
41. A rotating electrical machine having its self-inductance's of both the stator and the rotor windings independent of the rotor position will definitely not develop
(1) Starting Torque
(2) Synchronizing torque
(3) Hysteresis Torque
(4) Reluctance torque
42. If peak value of phase $m m f$ is $F_{\max }$, then peak value of the rotating field caused by three phase is
(1) $(3 / 2) F_{\text {max }}$
(2) $F_{\text {max. }}$
(3) $3 \mathrm{~F}_{\max }$
(4) $(1 / 2) F_{\text {max. }}$
43. A $50 \mathrm{~Hz}, 4$ pole turbo generator rated at $20 \mathrm{MVA}, 13.2 \mathrm{KV}$ has inertia constant $\mathrm{H}=3 \mathrm{~kW} \mathrm{sec} / \mathrm{KVA}$. The kinetic energy stored in the rotor is
(1) 80 MJ
(2) 60 MJ
(3) 20 MJ
(4) 10 MJ

PHD-EE-2018 (Electrical Engineering) Code-D
(11)

## Questions

No.
44. An alternator is supplying a load of 300 kW of a p.f. of 0.6 lagging. If the power factor is raised to unity. How many more kilowatts can alternator supply for the same KVA loading
(1) 100 kW
(2) 200 kW
(3) 300 kW
(4) 500 kW
45. A 300 kVA , single phase transformer is designed to have resistance of $1.5 \%$ and max. efficiency occurs at load of 173.2 kVA . When supplying the full load at 0.8 p.f. lagging at normal voltage, the efficiency will be
(1) $12.6 \%$
(2) $97.6 \%$
(3) $35.5 \%$
(4) $29.6 \%$
46. For constant load current at which power factor the efficiency of a transformer will be maximum?
(1) Zero power factor
(2) Unity power factor
(3) Leading power factor
(4) Lagging power factor
47. The all-day efficiency is the term related to
(1) Power transformer
(2) Distribution transformer
(3) Current transformer
(4) Voltage transformer

## Code-D

48. Satisfactory commutation of $D C$ machine requires
(1) Smooth, concentric commutator properly undercut
(2) Brushes should smoothly run in the holders
(3) Brushes should be of proper grade and size
(4) All of the above
49. In a 3-Ф induction motor running at full load which of these parameters is stationary, with respect to the stator mmf wave?
(1) Stator winding
(2) Rotor winding
(3) Both rotor and stator winding
(4) Rotor mmf wave
50. The damper windings also called the squirrel cage winging's damper grids
(1) consists of short-circuited copper bars embedded in the field pole faces
(2) are provided in a synchronous motor to make itself starting
(3) are provided on the stator for improving power factor
(4) both (1) and (2)
51. Mho relay is used for the protection of
(1) medium length lines
(2) long transmission lines
(3) short length lines
(4) no length criterion
52. An overhead line conductor has an inductance per unit length of $L$ henry. Questions If the entire medium around the conductor is filled with a dielectric material of permittivity $\varepsilon$, then the inductance will
(1) $\mathrm{L} / \varepsilon$
(2) $\mathrm{L} / 0.5 \varepsilon$
(3) L
(4) unchanged
53. When a line-to-ground fault occurs, the current in the phase is 100 A . The zero sequence current in the case will be
(1) 33.3 A
(2) 0 A
(3) 66.6 A
(4) 99.9 A
54. Air blast circuit breaker is most suitably used in
(1) Up to 132 KV line
(2) Up to 260 KV line
(3) Up to 400 KV line
(4) any voltage
55. To reduce the adverse effect of corona discharge which conductor is specially used?
(1) ACSR
(2) Bundle conductor
(3) Aluminium conductor
(4) Copper conductor

## Code-D

| Question <br> No. | Questions |
| :---: | :---: |
| 56. | A single phase one pulse controlled circuit has a resistance R and counter <br> emf E load 400 sin (314t) as the source voltage. For a load counter emf of <br> 200 V , the range of firing angle control is <br>  <br> (1) $30^{\circ}$ to $150^{\circ}$ (2) $30^{\circ}$ to $180^{\circ}$ <br> (3) $60^{\circ}$ to $120^{\circ}$ (4) $60^{\circ}$ to $180^{\circ}$ |

57. Let of a thyristor $V_{c 1}, V_{c 2}, V_{c 3}$ are forward break over voltage for gate current $\mathrm{I}_{\mathrm{g} 1}, \mathrm{I}_{\mathrm{g} 2}, \mathrm{I}_{\mathrm{g} 3}$ respectively. Then
(1) $\mathrm{V}_{\mathrm{c} 1}>\mathrm{V}_{\mathrm{c} 2}>\mathrm{V}_{\mathrm{c} 3}$ when $\mathrm{I}_{\mathrm{g} 1}>\mathrm{I}_{\mathrm{g} 2}>\mathrm{I}_{\mathrm{g} 3}$
(2) $\mathrm{V}_{\mathrm{c} 1}>\mathrm{V}_{\mathrm{c} 2}>\mathrm{V}_{\mathrm{c} 3}$ when $\mathrm{I}_{\mathrm{g} 1}<\mathrm{I}_{\mathrm{g} 2}<\mathrm{I}_{\mathrm{g} 3}$
(3) $V_{c 1}=V_{c 2}=V_{c 3}$ any value of $I_{g}$.
(4). $V_{c 1}>V_{c 2}>V_{c 3}$ when $I_{g 1} \geq I_{g 2} \geq I_{\text {g } 3}$
58. Triacs cannot be used in AC voltage regulator for a
(1) Resistive load
(2) Inductive load
(3) Back emf load
(4) Resistive Inductive
59. Latching current for an SCR inserted between a dc voltage source of 200 V and load is 100 mA . Compute the minimum rate of width pulse required to turn $O N$ the $S C R$ in case load consists of $R=20 \Omega$ in series with $\mathrm{L}=0.2 \mathrm{H}$
(1) $200 \mu \mathrm{~s}$
(2) $300 \mu \mathrm{~s}$
(3) $150 \mu \mathrm{~s}$
(4) $100 \mu \mathrm{~s}$

## Code-D

| Question No. | Questions |
| :---: | :---: |
| 60. | Delay time is defined by the interval when <br> (1) gate current increases from $90 \%$ to $100 \%$ of its final value <br> (2) anode current reaches $10 \%$ from forward leakage current <br> (3) anode voltage drops from $100 \%$ to $90 \%$ of its actual value <br> (4) all of these |
| 61. | In the given figure, the Thevenin equivalent voltage and impedance as seen from the terminals $\mathrm{P}-\mathrm{Q}$ is given by <br> (1) $4 V$ and $7.5 \Omega$ <br> (2) 2 V and $7.5 \Omega$ <br> (3) 4 V and $5 \Omega$ <br> (4) 2 V and $5 \Omega$ |
| 62. | A coil having a resistance of $5 . \Omega$ and inductance of 0.1 H is connected in series with a condenser of capacitance $50 \mu \mathrm{~F}$. A constant alternating voltage of 200 V is applied to the circuit. The voltage across coil at resonance is <br> (1) 200 V <br> (2) 1788 V <br> (3) 1800 V <br> (4) 2000 V |
| 63. | An RLC series circuit resonates at a frequency $w_{r}$ the ratio of $w_{r} L / R=10$ the variable frequency voltage applied to the circuit is $20 \sin (\omega t+\pi / 3)$ the voltage measured across the capacitance <br> (1) $200 / \sqrt{ } 2$ <br> (2) $220 / \sqrt{ } 2$ <br> (3) $20 / \sqrt{ } 2$ <br> (4) $1 / 2$ |

## Questions

64. What is the relation between line voltage and phase voltage in case of delta connection?
(1) $V_{L}=V_{p}$.
(2) $\mathrm{V}_{\mathrm{t}}=1 / \sqrt{ } 3 \mathrm{~V}_{\mathrm{p}}$.
(3) $\mathrm{V}_{\mathrm{L}}=\sqrt{ } 3 \mathrm{~V}_{\mathrm{p}}$.
(4) None of these
65. The rms value of the current is a wire which carries a dc current of 10 A and a sinusoidal alternating current of peak value 20 A is
(1) 10 A
(2) 14.14 A
(3) 15 A
(4) 17.32 A
66. The purpose of compensation for a thermocouple is
(1) To decrease temperature sensitivity
(2) To increase volatge output
(3) To cancel unwanted voltage output of a thermocouple
(4) Used for high-temperature circuits
67. Semiconductor strain gages typical have much higher gage factors than those of metallic strain gages primarily due to
(1) Higher temperature sensitivity
(2) Higher Poisson's ratio
(3) Higher piezoresistive coefficient
(4) Higher magnetostrictive coefficient

## Questions

No.
68. For the op-amp shown in the figure, the bias currents are $I_{b 1}=450 \mathrm{nA}$ and $I_{b 2}=350 \mathrm{nA}$. The values of the input bias current $\left(I_{b}\right)$ and the input offset current ( $\mathrm{I}_{\mathrm{f}}$ ) are

(1) $\mathrm{I}_{\mathrm{b}}=800 \mathrm{nA}, \mathrm{I}_{\mathrm{f}}=50 \mathrm{nA}$
(2) $\mathrm{I}_{\mathrm{b}}=800 \mathrm{nA}, \mathrm{I}_{\mathrm{f}}=100 \mathrm{nA}$
(3) $\mathrm{I}_{\mathrm{b}}=400 \mathrm{nA}, \mathrm{I}_{\mathrm{f}}=50 \mathrm{nA}$
(4) $\mathrm{I}_{\mathrm{b}}=400 \mathrm{nA}, \mathrm{I}_{\mathrm{f}}=100 \mathrm{nA}$
69. A Hall Effect sensor
(1) exists only in theory
(2) is a non-contacting magnetic sensor
(3) can operate only a few times before failure
(4) produces very large voltages
70. For turbulent flow, the velocity at the center is $\qquad$ times the mean velocity.
(1) 1.2
(2) 2.2
(3) 2
(4) 3.333
71. A psychrometric chart is used to determine
(1) pH
(2) Sound velocity in glasses
(3) $\mathrm{CO}_{2}$ concentration
(4). Relative humidity

Question
No.
76. A 500 kVA , three phase transformer has iron losses of 300 W and full load copper losses of 600 W . The percentage load at which the transformer is expected to have maximum efficiency is
(1) $50.0 \%$
(2) $70.7 \%$
(3) $141.4 \%$
(4) $200.0 \%$
77. A single phase transformer has a maximum efficiency of $90 \%$ at full load and unity power factor. Efficiency at half load at the same power factor is
(1) $86.7 \%$
(2) $88.26 \%$
(3) $88.9 \%$
(4) $87.8 \%$
78. Which of the following motor definitely has a permanent magnet rotor
(1) DC commutator motor
(2) Brushless DC motor
(3) Stepper motor
(4) Reluctance motor
79. The type of single phase induction motor having the highest power factor at full load is
(1) Shaded pole type
(2) Split phase type
(3) Capacitor start type
(4) Capacitor run type
80. The direction of rotation of a three phase induction motor is clockwise when it is supplied with three phase sinusoidal voltage having phase sequence A-B-C, for counter clockwise rotation of the motor, the phase sequence of the power supply should be
(1) B-C-A
(2) $\mathrm{C}-\mathrm{A}-\mathrm{B}$
(3) A-C-B
(4) None of above

## Question

## Questions

93. A conductor of length $L$ has current I passing through it, when it is placed parallel to strong magnetic field. The force experienced by the conductor will be
(1) BIL
(2) $\mathrm{BIL}^{2}$
(3) $\mathrm{BI}^{2} \mathrm{~L}$
(4) Zero
94. Cork Screw rule is used to find
(1) Direction of magnetic field
(2) Direction of electric field
(3) Direction of current
(4) Direction of emf
95. A point pole has a strength of $4 \pi \times 10^{-4}$ weber. The force in Newtons on a point pole of $4 \pi \times 1.5 \times 10^{-4}$ weber placed at a distance of 10 cm from it will be
(1) 20 N
(2) 15 N
(3) 7.5 N
(4) 3.75 N
96. In a sample it is observed that a carrier takes $100 \mu$ s to over a distance of 10 cm . If the applied external field is $10^{4} \mathrm{~V} / \mathrm{cm}$; find the mobolity
(1) $10^{7} \mathrm{~cm}^{2} / \mathrm{Vs}$
(2) $10^{-3} \mathrm{~cm}^{2} / \mathrm{Vs}$
(3) $10 \mathrm{~cm}^{2} / \mathrm{Vs}$
(4) $10^{7} \mathrm{~m}^{2} / \mathrm{Vs}$
97. The current gain of a bipolar transistor drops at high frequency because of
(1) Transistor internal capacitances
(2) High current effects in the base
(3) Parasitic inductive elements
(4) The Early effect
